

PUPIL NAME: _____ CLASS: _____ TEACHER: _____

KEY TOPIC 2 • C1500–C1700

The Medical Renaissance in England

Humanism, The Anatomical Revolution, and The Persistence of Ancient Dogma

Primary Visual Evidence: Andreas Vesalius Performing Human Dissection at Padua (Frontispiece of De Fabrica, 1543)

CONTEMPORARY PRINT ARCHIVE

1. COMPARISON DRILLS [4M]
Q3: Explain one similarity or difference between eras. Specific factual detail + direct comparative reasoning (5 mins).

2. CAUSAL ANALYSIS [12M]
Q4: Explain why change or continuity occurred. 3 structured PEE paragraphs using 2 stimulus points + own knowledge (15 mins).

3. THEMATIC ESSAY [16M+4M]
Q5/Q6: 'How far do you agree?' Judgement essay balancing factors across broad time periods + SPaG criteria (25 mins).

COURSE SPECIFICATION • KEY ENQUIRY SEQUENCE	LEARNT	REVISED
Key Topic 2.1: The New Spirit of Enquiry: Humanism, The Printing Press & The Royal Society <i>How did movable type printing and the scientific method challenge 1,500 years of clerical medical dogma?</i>	☐	☐
Key Topic 2.2: Thomas Sydenham & The Art of Bedside Observation (1676) <i>Why was Sydenham nicknamed 'The English Hippocrates', and how did his disease classification revolutionize diagnosis?</i>	☐	☐
Key Topic 2.3: Andreas Vesalius & The Anatomical Revolution (1543) <i>How did direct human dissection in De Fabrica disprove 300+ Galenic errors, and why did it fail to cure disease?</i>	☐	☐
Key Topic 2.4: William Harvey & The Circulation of the Blood (1628) <i>How did mathematical calculation and ligature experiments prove that blood circulates rather than being burned as fuel?</i>	☐	☐
Key Topic 2.5: Case Study: Continuity in Treatment & The Great Plague of London (1665) <i>How did civic quarantine orders change municipal response, and why did treatment show complete continuity with 1348?</i>	☐	☐

LIVING TIMELINE • PART 1: HUMANISM & THE ANATOMICAL REVOLUTION (1440–1660)

Instructions: As you study each enquiry lesson, complete the timeline missions by sketching and annotating in the corresponding Key Topic boxes below.

1440 • Johannes Gutenberg: Movable Metal Type Printing Press

Key Topic 2.1

Gutenberg invents movable metal type in Mainz (introduced to England by Caxton in 1476). Shatters Church monopoly on medical manuscript copying. Enables rapid mass-production of identical medical texts and anatomical diagrams without copyist errors.

1543 • Andreas Vesalius: De Humani Corporis Fabrica & Padua Dissections

Key Topic 2.3

Vesalius personally conducts human dissections at Padua, correcting over 300 Galenic anatomical errors (e.g. human lower jaw is one bone not two). Masterfully illustrated by Titian's workshop and mass-printed, creating the foundation of modern anatomy.

1628 • William Harvey: De Motu Cordis & Circulation of the Blood

Key Topic 2.4

Harvey mathematically calculates the volume of blood pumped per hour (540 pints), proving blood circulates continuously through arteries and veins. Disproves Galen's 1,400-year theory that blood is consumed as fuel manufactured by the liver.

1660 • The Royal Society: Nullius in Verba & Scientific Peer Review

Key Topic 2.1

Founded under royal patronage (Charles II). Operating under the motto Nullius in Verba ('Take nobody's word for it'), it establishes the empirical scientific method, publishing Philosophical Transactions (1665) to share peer-reviewed laboratory research across Europe.

LIVING TIMELINE • PART 2: OBSERVATION, PLAGUES & THE MICROSCOPIC WORLD (1665–1676)

Instructions: Complete the timeline sketches and notes as you master each enquiry lesson.

1665 • Robert Hooke: Micrographia & Discovery of Plant Cells

Key Topic 2.1

Hooke uses compound microscopes to examine cork tissue, coining the term 'cell'. His stunning fold-out engravings of fleas and insects shock the public, demonstrating that visible nature contains an unseen microscopic architecture.

1665 • The Great Plague of London: Civic Quarantine & Bills of Mortality

Key Topic 2.5

The plague kills 100,000 Londoners. The Mayor enforces strict municipal orders: infected houses padlocked for 28 days with red crosses; parish watchmen guard doors; mass plague pits dug; yet treatments (bleeding, tobacco) remain identical to 1348.

1676 • Thomas Sydenham: Observationes Medicae & Bedside Observation

Key Topic 2.2

The 'English Hippocrates' urges doctors to abandon theoretical books and study living symptoms at the bedside. Classifies diseases into distinct biological species (distinguishing scarlet fever from measles); prescribes cool regimes for smallpox and cinchona bark for malaria.

1676 • Antonie van Leeuwenhoek: Discovery of 'Animalcules' (Bacteria)

Key Topic 2.1

Using precision single-lens microscopes magnifying up to 300x, Leeuwenhoek discovers living microorganisms in rainwater and dental plaque. Yet without understanding that microbes cause illness, the discovery saves zero lives until Pasteur in 1861.

• 'DO NOW' RETRIEVAL DRILL (10 RECALL QUESTIONS)

Score: [/ 10]

1. In what century did Hippocrates live and teach in Ancient Greece?

2. Name the four bodily fluids identified in Hippocratic medicine.

3. Which ancient Roman physician expanded this into the Theory of Opposites?

4. Why did the medieval Catholic Church actively protect Galen's medical ideas?

5. What Latin term refers to foul-smelling air blamed for causing epidemic disease?

6. In what year did the Black Death first arrive in England?

7. Which Franciscan friar was imprisoned in 1277 for urging scientific experiments?

8. What glass flask was used by medieval physicians to inspect urine?

9. What was the primary guiding principle of medieval monastic hospitals?

10. Name one humoural treatment used by medieval physicians to purge excessive blood.

• BESPOKE LESSON NOTE-TAKING SCAFFOLD

ACTIVE READING • 1 A4 SHEET

Instructions: As you read the chapter, complete these 3 structured enquiry blocks to map how ideas spread and why clerical authority broke down:

1. The Movable Type Printing Press (c. 1440 Gutenberg / 1476 Caxton)

TECHNOLOGY

Explain how mass-producing identical copies broke the Catholic Church's clerical monopoly on medical textbooks:

2. The Royal Society & 'Nullius in Verba' (1660 / Royal Charter 1662)

SCIENTIFIC METHOD

Explain how peer review and Philosophical Transactions (1665) replaced Galenic authority with laboratory proof:

3. The Limits of Renaissance Science (Why didn't this cure sick patients?)

HISTORICAL PARADOX

Explain why ordinary sick people experienced almost zero benefit despite this revolution in printing and elite science:

Stimulus: The printing press (c1440/1476) The Royal Society (1660/1662) *(You must also use information of your own)*

(1 box = 1 full paragraph: Stimulus 1 + Stimulus 2 + Own Knowledge)

Evaluate the paradox: books remained Latin luxury items for the wealthy; ordinary people still believed in miasma and the Four Humours.

Gutenberg press (c1440) • William Caxton (1476) • clerical monopoly • vernacular translations • Royal Society (1660) • Royal Charter (1662) • Nullius in Verba • Philosophical Transactions (1665) • peer review • animalcules • Robert Hooke (1665)

This image shows a single sheet of white paper with horizontal ruling lines. The lines are evenly spaced and run across the width of the page. There are no margins, text, or other markings on the paper.

← Pages 2-3

KT2.1: The New Spirit of Enquiry: Humanism, The Printing Press & The Royal Society

**EXTENDED WRITING • DISCIPLINARY NOTES •
STRUCTURED RESPONSE**

[illegible]

INDEPENDENT PRACTICE • EXTENDED EXAM RESPONSE

Structure each paragraph: Point, Evidence, Explanation, and an explicit analytical link back to the question stem. 7/24

• 'DO NOW' RETRIEVAL DRILL (10 RECALL QUESTIONS)

Score: [/ 10]

1. In what year did Johannes Gutenberg invent the movable metal type printing press?

2. In what year did William Caxton introduce the first printing press to England?

3. How did the printing press break the Catholic Church's clerical monopoly on books?

4. In what year was the Royal Society formally founded in London?

5. What was the Latin motto of the Royal Society, meaning 'Take nobody's word for it'?

6. Name the world's first peer-reviewed scientific journal, published in 1665.

7. Who published Micrographia in 1665 featuring detailed microscopic illustrations?

8. What term did Antonie van Leeuwenhoek give to microscopic bacteria in 1676?

9. Why did optical discoveries of microbes save zero lives in the Renaissance?

10. Which ancient Greek physician originated the clinical observation of patients?

• BESPOKE LESSON NOTE-TAKING SCAFFOLD

ACTIVE READING • 1 A4 SHEET

Instructions: As you read the chapter, complete these 3 structured enquiry blocks to evaluate why Sydenham became 'The English Hippocrates':

1. Bedside Observation vs. Book-Learning (Observationes Medicae 1676)

CLINICAL METHOD

Explain how Sydenham's method of closely monitoring real-time symptoms rejected Galenic library study and astrology:

2. Classifying Diseases into 'Distinct Species' (Like Plants in Botany)

DIAGNOSIS

Explain how Sydenham viewed diseases as separate outside illnesses rather than unique personal fluid imbalances (e.g. scarlet fever vs measles):

3. The Sydenham Paradox (Clinical Genius with Medieval Treatments)

CONTINUITY PARADOX

Explain why Sydenham prescribed cinchona bark and fresh air, but still relied heavily on bloodletting and humoral purging:

KT2.2: Thomas Sydenham & The Art of Bedside Observation (1676)

EXTENDED WRITING • DISCIPLINARY NOTES • STRUCTURED RESPONSE

[illegible]

KT2.2: Thomas Sydenham & The Art of Bedside Observation (1676)

INDEPENDENT PRACTICE • EXTENDED EXAM
RESPONSE[illegible]

KT2.3: Andreas Vesalius & The Anatomical Revolution (1543)

KNOWLEDGE RETRIEVAL • ACTIVE LESSON NOTE
SCAFFOLD

• 'DO NOW' RETRIEVAL DRILL (10 RECALL QUESTIONS)

Score: [/ 10]

1. What nickname was given to Thomas Sydenham because of his clinical approach?

2. In what landmark 1676 book did Sydenham set out his clinical observations?

3. How did Sydenham view diseases differently from humoral theory?

4. Which two childhood illnesses did Sydenham successfully prove were separate diseases?

5. What imported South American tree bark did Sydenham prescribe for malaria fevers?

6. What revolutionary cooling treatment did Sydenham prescribe for smallpox patients?

7. In what way did Sydenham's treatments still show continuity with the Middle Ages?

8. What was the Royal Society's Latin motto promoting empirical evidence?

9. Where were medical manuscripts copied prior to the invention of the printing press?

10. In what year did William Caxton set up the first printing press in England?

• BESPOKE LESSON NOTE-TAKING SCAFFOLD

ACTIVE READING • 1 A4 SHEET

Instructions: As you read the chapter, complete these 3 structured enquiry blocks to analyze how direct human dissection overturned 1,400 years of Galenic dogma:

1. Direct Human Dissection & Correcting Galen's Errors (De Fabrica 1543)

DISSECTION

Detail 2 specific anatomical errors Vesalius corrected by dissecting human criminals rather than Galen's apes and pigs:

2. The Fierce Backlash from Conservative Doctors & Universities

RESISTANCE

Explain why professors like Jacobus Sylvius attacked Vesalius and claimed the human body had 'changed' since Galen:

3. The Significance Verdict: Master Anatomist vs Zero Cures

EVALUATION

Explain why De Fabrica transformed surgery and medical training forever, yet failed to cure a single sick patient in 1543:

Stimulus: De Humani Corporis Fabrica (1543) Medical treatments in the 16th century *(You must also use information of your own)*

(1 box = 1 full paragraph: Stimulus 1 + Stimulus 2 + Own Knowledge)

Evaluate: Vesalius created accurate anatomy, but knowing the structure of the body did not cure disease. Doctors remained helpless at the bedside.

Andreas Vesalius • University of Padua • De Humani Corporis Fabrica (1543)
• human dissection • 300+ Galenic errors • mandible (jawbone) • sternum (3 parts not 7) • septum pores • anatomical plates • lack of medical cures • continued humoral bleeding

[illegible]

KT2.3: Andreas Vesalius & The Anatomical Revolution (1543)

EXTENDED WRITING • DISCIPLINARY NOTES • STRUCTURED RESPONSE

[illegible]

[illegible]

KT2.4: William Harvey & The Circulation of the Blood (1628)

KNOWLEDGE RETRIEVAL • ACTIVE LESSON NOTE
SCAFFOLD

• 'DO NOW' RETRIEVAL DRILL (10 RECALL QUESTIONS)

Score: [/ 10]

1. In what year did Andreas Vesalius publish De Humani Corporis Fabrica?

2. At which famous Italian university did Vesalius serve as professor of surgery?

3. How did Vesalius's method of teaching anatomy differ from medieval professors?

4. How many anatomical errors made by Galen did Vesalius identify and correct?

5. State one specific anatomical error of Galen corrected by Vesalius.

6. Why did Vesalius's accurate anatomical discoveries fail to cure sick patients?

7. Which ancient Roman doctor's anatomical monopoly was overturned by Vesalius?

8. What 1676 book did Thomas Sydenham publish on clinical bedside symptoms?

9. In what year was the Royal Society granted its Royal Charter by Charles II?

10. What was the Royal Society's motto promoting empirical evidence?

• BESPOKE LESSON NOTE-TAKING SCAFFOLD

ACTIVE READING • 1 A4 SHEET

Instructions: As you read the chapter, complete these 3 structured enquiry blocks to trace how mechanical physics and mathematics proved circulation:

1. The Mechanical Pump & Mathematical Proof (De Motu Cordis 1628)

MATHEMATICS

Explain how Harvey calculated that 540 pints of blood pumped per hour mathematically destroyed Galen's liver theory:

2. The Arm Ligature Experiment & One-Way Vein Valves

EXPERIMENT

Explain how tying tight and loose bandages proved arteries carry blood from the heart and vein valves only allow flow back to it:

3. The 50-Year Delay & Continued Bloodletting

STAGNATION

Explain why doctors called Harvey a 'circulator' (quack) and continued phlebotomy (bloodletting) despite knowing blood circulated:

Stimulus: Calculating blood volume (540 pints/hr) De Motu Cordis (1628) (You must also use information of your own)

(1 box = 1 full paragraph: Stimulus 1 + Stimulus 2 + Own Knowledge)

Explain why conservative doctors rejected Harvey ('quack') and why his discovery did not change medical treatments or halt bloodletting.

Task: Write your Paragraph 1 response below, then continue Paragraphs 2, 3, and your final Evaluative Verdict on Pages 18–19:

This image shows a single sheet of white paper with horizontal blue ruling lines. The lines are evenly spaced and run across the width of the page. There are no margins, text, or other markings on the paper.

← Pages 2-3

KT2.4: William Harvey & The Circulation of the Blood (1628)

EXTENDED WRITING • DISCIPLINARY NOTES • STRUCTURED RESPONSE

[illegible]

[illegible]

• 'DO NOW' RETRIEVAL DRILL (10 RECALL QUESTIONS)

Score: [/ 10]

1. In what year did William Harvey publish De Motu Cordis?

2. How did Harvey mathematically disprove Galen's liver theory?

3. What one-way valves in veins did Harvey investigate using his arm ligature experiment?

4. What microscopic vessels connecting arteries and veins could Harvey not observe?

5. Why did conservative doctors nickname Harvey a 'circulator' (quack)?

6. In what year was Vesalius's De Humani Corporis Fabrica published?

7. State one anatomical error of Galen corrected by Vesalius.

8. What nickname was given to Thomas Sydenham?

9. In what year did the Black Death first strike England?

10. Name the imported South American tree bark prescribed by Sydenham for malaria fevers.

• BESPOKE LESSON NOTE-TAKING SCAFFOLD

ACTIVE READING • 1 A4 SHEET

Instructions: As you read the chapter, complete these 3 structured enquiry blocks to weigh municipal change against medical continuity:

1. Municipal Quarantine & State Enforcement (What Changed since 1348?)

CIVIC CHANGE

Detail how the Mayor of London enforced 28-day house lock-ins, red crosses, parish watchmen, and Bills of Mortality:

2. Treatments & Beliefs about Cause (What Stayed Exactly the Same?)

MEDICAL CONTINUITY

Explain why ordinary Londoners and plague doctors still blamed miasma and God, relying on smoking tobacco, pomanders, and bleeding:

3. The Historical Verdict: Civic Efficiency vs. Biological Helplessness

VERDICT

Evaluate: Did London handle the 1665 plague better than 1348 because of science, or merely because of ruthless municipal policing?

Stimulus: The Four Humours and miasma Quarantine and watchmen *(You must also use information of your own)*

(1 box = 1 full paragraph: Stimulus 1 + Stimulus 2 + Own Knowledge)

Weigh civic organisation against medical ignorance: government responses became more organized, but medical knowledge of the disease was identical to 1348.

The Great Plague (1665) • London Bills of Mortality • 28-day house quarantine • red crosses • Lord have mercy upon us • searchers of the dead • mass plague pits • parish watchmen • miasma • pomanders • smoking tobacco • continued bloodletting
