# The Medical Renaissance in England

Humanism, The Anatomical Revolution, and The Persistence of Ancient Dogma

**Primary Visual Source:** *Andreas Vesalius Dissecting at Padua* (Frontispiece of *De Humani Corporis Fabrica*, Accession Shelfmark: **ARCH-MED-1543**)

| COURSE SPECIFICATION • KEY ENQUIRY SEQUENCE                                                                                                                                                                                      | LEARNT                   | REVISED                  |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|--------------------------|
| <b>Key Topic 2.1: The New Spirit of Enquiry: Humanism, The Printing Press &amp; The Royal Society</b><br><i>How did movable type printing and the scientific method challenge 1,500 years of clerical medical dogma?</i>         | <input type="checkbox"/> | <input type="checkbox"/> |
| <b>Key Topic 2.2: Thomas Sydenham &amp; The Art of Bedside Observation (1676)</b><br><i>Why was Sydenham nicknamed 'The English Hippocrates', and how did his disease classification revolutionize diagnosis?</i>                | <input type="checkbox"/> | <input type="checkbox"/> |
| <b>Key Topic 2.3: Andreas Vesalius &amp; The Anatomical Revolution (1543)</b><br><i>How did direct human dissection in De Fabrica disprove 300+ Galenic errors, and why did it fail to cure disease?</i>                         | <input type="checkbox"/> | <input type="checkbox"/> |
| <b>Key Topic 2.4: William Harvey &amp; The Circulation of the Blood (1628)</b><br><i>How did mathematical calculation and ligature experiments prove that blood circulates rather than being burned as fuel?</i>                 | <input type="checkbox"/> | <input type="checkbox"/> |
| <b>Key Topic 2.5: Case Study: Continuity in Treatment &amp; The Great Plague of London (1665)</b><br><i>How did civic quarantine orders change municipal response, and why did treatment show complete continuity with 1348?</i> | <input type="checkbox"/> | <input type="checkbox"/> |

## LIVING TIMELINE • PART 1: HUMANISM & THE ANATOMICAL REVOLUTION (1440–1628)

**Instructions:** As you study each enquiry lesson, complete the timeline missions by sketching and annotating in the corresponding Key Topic boxes below.

### 1440 • Johannes Gutenberg: Movable Metal Type Printing Press

Key Topic 2.1

Gutenberg invents movable metal type in Mainz (introduced to England by Caxton in 1476). Shatters Church monopoly on medical manuscript copying. Enables rapid mass-production of identical medical texts and anatomical diagrams without copyist errors.

### c. 1500 • The Rise of Medical Humanism

Key Topic 2.1

Scholars bypass distorted medieval Church translations and translate original Greek and Latin medical manuscripts directly. Promotes human reason, empirical observation, and critical questioning, fostering an intellectual climate ready to challenge Galen.

### 1543 • Andreas Vesalius Publishes *De Humani Corporis Fabrica*

Key Topic 2.3

Based on direct human dissection at Padua, Vesalius corrects over 300 errors in Galen's anatomy (human lower jaw is one bone, not two; no pores in the heart septum). Proves Galen only dissected animals. Inspires empirical observation across Europe.

### 1628 • William Harvey Publishes *De Motu Cordis*

Key Topic 2.4

Calculates heart pumps 540 pints of blood per hour—proving blood must circulate through a closed system rather than being continuously manufactured by the liver. Demonstrates vein valves ensure one-way flow toward the heart.

## LIVING TIMELINE • PART 2: THE SCIENTIFIC METHOD & BEDSIDE OBSERVATION (1660–1676)

**Instructions:** As you study each enquiry lesson, complete the timeline missions by sketching and annotating in the corresponding Key Topic boxes below.

### 1660 / 1662 • The Royal Society Founded & Granted Royal Charter

Key Topic 2.1

Operates under Nullius in Verba ('Take nobody's word for it'); receives Royal Charter from Charles II in 1662. Publishes Philosophical Transactions (1665), Europe's first peer-reviewed journal, institutionalising empirical laboratory testing.

### 1665 • Robert Hooke Publishes Micrographia (Leeuwenhoek Microbes 1676)

Key Topic 2.1

Hooke uses compound microscopes to reveal plant cells and fleas. In 1676, Antonie van Leeuwenhoek observes living 'animalcules' (bacteria). However, because microbes are not linked to disease, the discovery saves zero lives.

### 1665 • Case Study: The Great Plague Catastrophe in London

Key Topic 2.5

Kills 100,000 Londoners (20% of the city). Mayor enforces 28-day household quarantines with watchmen and red crosses. Catastrophic slaughter of 200,000 dogs and cats allows infected black rat fleas to proliferate unchecked.

### 1676 • Thomas Sydenham Publishes Observationes Medicae

Key Topic 2.2

Nicknamed 'The English Hippocrates', Sydenham pioneers clinical bedside observation, classifying diseases into distinct species by symptoms. Prescribes cooling regimes for smallpox and cinchona bark (quinine) for malaria fevers.

*Sydenham proved practical observation beat theoretical philosophy every time—even if he still carried leeches in his medical bag.*

3/14

# KT2.1: The New Spirit of Enquiry: Humanism, The Printing Press & The Royal Society (c1500–c1700)

KEY TOPIC  
2.1

## TASK 1: PRIOR KNOWLEDGE RETRIEVAL (DO NOW)

Recall Target: 4/4

1. In what year did the Black Death arrive in England?
2. Name the ancient Roman physician who created the Theory of Opposites.
3. What four bodily fluids did the Hippocratic theory claim must remain balanced for health?
4. State one reason why the medieval Catholic Church actively protected Galen's medical ideas.

## TASK 2: CORE KNOWLEDGE ANCHOR • HIGH-YIELD GCSE CONCEPTS

**Gutenberg's Movable Type (c1440 / Caxton 1476):** Took book production out of Catholic Church scriptoria; mass-produced identical medical treatises and anatomical woodcuts across Europe without copyist errors.

**The Royal Society (1660 / Royal Charter 1662):** Elite scientific body granted Crown prestige by Charles II; operated under Nullius in Verba ('Take nobody's word for it'); published Philosophical Transactions (1665), Europe's first peer-reviewed scientific journal.

**Optical Discoveries & The Renaissance Paradox:** Hooke's Micrographia (1665) and Leeuwenhoek's 'animalcules' (1676) revealed microscopic cells and bacteria, but without understanding that microbes caused disease, saving zero lives.

## TASK 3: DUAL-TERM ANALYTICAL DISTINCTION

Explain the crucial difference between hand-copied **monastic scriptoria** (Church monopoly) and Gutenberg's **movable metal type** (mass scientific communication):

## TASK 4: GCSE SECTION B COMPARATIVE ANALYSIS • Q3 PRACTICE [4 MARKS]

Similarity

**Explain one way in which ideas about the cause of disease in the Renaissance were similar to ideas in the Medieval period. [4 marks]**

*Exam Hint: Focus on the persistent reliance on miasma (foul air) and God's will among ordinary people, despite elite scientific debates.*

 **Living Timeline Mission:** Turn back to Pages 2–3 (Key Topic 2.1). In the drawing box, sketch Gutenberg's screw press producing identical anatomical plates and annotate the Royal Society's motto: 'Nullius in Verba' ('Take nobody's word for it')!

Turn to Pages 2–3

**Explain why there were changes in the way ideas about the causes of disease and illness were communicated in the period c1500–c1700. [12 marks]**

Page 5 of 14

## KT2.2: Thomas Sydenham &amp; The Art of Bedside Observation (1676)

KEY TOPIC 2.2

## TASK 1: PRIOR KNOWLEDGE RETRIEVAL (DO NOW)

Recall Target: 4/4

1. What was the Latin motto of the Royal Society, meaning 'Take nobody's word for it'?
2. Name the world's first peer-reviewed scientific journal published by the Royal Society in 1665.
3. What name did Antonie van Leeuwenhoek give to the microscopic organisms he observed in 1676?
4. Who published Micrographia in 1665 featuring a giant fold-out engraving of a flea?

## TASK 2: CORE KNOWLEDGE ANCHOR • HIGH-YIELD GCSE CONCEPTS

**The 'English Hippocrates':** Sydenham rejected university book-learning, pulse-taking charts, and astrology, insisting that physicians must sit at the bedside and carefully record patient symptoms over time.

**Classifying Diseases as Species:** Argued that diseases were separate biological entities with specific characteristics (like plants in a botany book), successfully distinguishing scarlet fever from measles.

**Treatments & The Limits of Change:** Prescribed cinchona bark (quinine) for malaria and cool regimes (open windows, light blankets) for smallpox; yet continued to rely on traditional bloodletting and purging.

## TASK 3: DUAL-TERM ANALYTICAL DISTINCTION

Explain the difference between medieval **humoral diagnosis** (treating individual imbalance) and Sydenham's **disease classification** (treating external disease species):

## TASK 4: GCSE SECTION B COMPARATIVE ANALYSIS • Q3 PRACTICE [4 MARKS]

Difference

**Explain one way in which Thomas Sydenham's approach to diagnosis was different from medieval physicians. [4 marks]**

*Exam Hint: Contrast Sydenham's detailed bedside observation of external symptoms with medieval urine charts and astrology.*

 **Living Timeline Mission:** Turn back to Pages 2–3 (Key Topic 2.2). In the drawing box, sketch Sydenham recording clinical symptoms at a patient's bedside and annotate his landmark book: *Observationes Medicae*!

Turn to Pages 2–3

How did Thomas Sydenham's focus on direct observation challenge traditional medical practice?

Question 4: Explain Why [12 marks • 15 mins]

Explain why Thomas Sydenham was significant in the development of medicine in Britain. [12 marks]

Edexcel Stimulus Prompts: You may use the following in your answer: • *Observationes Medicae* (1676) • *Classifying diseases into species*. You must also use information of your own.

ENQUIRY PLANNING MATRIX • MAP YOUR 3 PARAGRAPHS BEFORE WRITING

DRAFT NOTES ↓

1. BEDSIDE EMPIRICISM

Explain how Sydenham insisted on closely monitoring symptoms at the patient's bedside, rejecting Galenic book-learning and complex astrological charts.

2. CLASSIFYING DISEASES

Explain how Sydenham argued diseases were distinct species (like plants), successfully distinguishing measles from scarlet fever.

3. TREATMENT & LIMITS

Explain his practical innovations (cinchona bark for malaria; cool regimes for smallpox) alongside his continued use of bloodletting and purging.

KEY VOCABULARY: English Hippocrates • bedside observation • *Observationes Medicae* • clinical symptoms • disease species • scarlet fever vs measles • cinchona bark (quinine) • cooling regime • fresh air • smallpox ventilation

CAUSAL STEMS: Sydenham was significant because... • By rejecting classical theory, he established... • This directly led to... • However, his impact on treatments was limited because...

[P] Point: Direct factor sentence.

[E] Evidence: Specific dates, figures & names.

[E] Explanation: Causal mechanism (how & why).

[L] Link: Evaluate overall historical criteria.

TASK: USING THE STRUCTURE STRIP ABOVE, WRITE 1–2 DETAILED ANALYTICAL PARAGRAPHS BELOW (CONTINUE IN YOUR EXERCISE BOOK FOR FULL TIMED PAPER):

Handwriting practice lines for the task.

Teacher Assessment: Effort: [ 1 • 2 • 3 • 4 • 5 ] | Subject Knowledge: [ 1 • 2 • 3 • 4 ] | Analysis: [ 1 • 2 • 3PEEL Mastery: P E E • 4 ] L

Prescribing cool bedrooms for smallpox instead of boiling patients alive in sealed rooms made Sydenham a genius in 1676.

**KT2.3: Andreas Vesalius & The Anatomical Revolution (1543)****KEY TOPIC 2.3****TASK 1: PRIOR KNOWLEDGE RETRIEVAL (DO NOW)****Recall Target: 4/4**

1. What nickname was given to Thomas Sydenham because of his emphasis on bedside observation?  
.....
2. Name the 1676 book in which Sydenham set out his methods of clinical observation.  
.....
3. What treatment did Sydenham prescribe for malaria fevers, imported from South America?  
.....
4. Which two childhood illnesses did Sydenham successfully prove were separate diseases?  
.....

**TASK 2: CORE KNOWLEDGE ANCHOR • HIGH-YIELD GCSE CONCEPTS**

**Padua Anatomical Theatre & Human Dissection:** Vesalius descended from the high lecturer's pulpit to dissect human cadavers himself, rather than letting illiterate barber-surgeons do the cutting while professors read Galen.

**Correcting Over 300 Galenic Errors:** Proved Galen had only dissected animals (pigs, apes, dogs); proved human lower jaw is one bone not two; breastbone has 3 parts not 7; septum of the heart has no invisible holes.

**De Humani Corporis Fabrica (1543):** Published magnificent folio with precise woodcut anatomical illustrations mass-produced on printing presses; yet accurate anatomy could not cure infection or internal illness.

**TASK 3: DUAL-TERM ANALYTICAL DISTINCTION**

Explain the difference between medieval **Galenic orthodoxy** (reading ancient books) and Vesalius's **direct human dissection** (hands-on observation):

.....

.....

**TASK 4: GCSE SECTION B COMPARATIVE ANALYSIS • Q3 PRACTICE [4 MARKS]****Difference**

**Explain one way in which methods of investigating the human body in the Renaissance were different from methods in the Medieval period. [4 marks]**

*Exam Hint: Contrast medieval professors lecturing from Galenic texts while barbers cut with Vesalius performing human dissections himself.*

.....

.....

.....

 **Living Timeline Mission:** Turn back to Pages 2–3 (Key Topic 2.3). In the drawing box, sketch Vesalius dissecting the human muscular system and annotate his landmark masterwork: De Humani Corporis Fabrica (1543)!

**Turn to Pages 2–3**

Why did Andreas Vesalius succeed in overturning 1,400 years of Galenic anatomical authority?

Question 5/6: Evaluative Essay [16+4 marks • 25 mins]

'Andreas Vesalius's work on anatomy was the most significant breakthrough in medicine in the period c1500–c1700.' How far do you agree? Explain your answer. [16+4 marks]

Edexcel Stimulus Prompts: You may use the following in your answer: • De Humani Corporis Fabrica (1543) • Medical treatments in the 16th century. You must also use information of your own.

ENQUIRY PLANNING MATRIX • MAP YOUR 3 PARAGRAPHS BEFORE WRITING

DRAFT NOTES ↓

1. OVERTURNING GALEN (CHANGE)

Explain how Vesalius dissected human cadavers himself at Padua, correcting 300+ errors (e.g. human lower jaw is 1 bone not 2; no invisible heart pores).

2. VISUAL MASS COMMUNICATION

Explain the impact of De Fabrica (1543): masterfully illustrated anatomical plates printed identically on printing presses, inspiring a generation of anatomists.

3. LIMITATIONS ON TREATMENT (CRITERIA)

Evaluate: Vesalius created accurate anatomy, but knowing the structure of the body did not cure disease. Doctors remained helpless at the bedside.

KEY VOCABULARY: De Humani Corporis Fabrica (1543) • University of Padua • dissection • human cadaver • anatomical plates • 300 Galenic errors • lower jaw (mandible) • septum pores • breastbone segments • animal vs human anatomy

CAUSAL STEMS: On the one hand, Vesalius transformed anatomy because... • Crucially, this disproved... • However, in terms of treating patients... • Therefore, his immediate impact was...

[P] Point: Direct factor sentence.

[E] Evidence: Specific dates, figures & names.

[E] Explanation: Causal mechanism (how & why).

[L] Link: Evaluate overall historical criteria.

TASK: USING THE STRUCTURE STRIP ABOVE, WRITE 1–2 DETAILED ANALYTICAL PARAGRAPHS BELOW (CONTINUE IN YOUR EXERCISE BOOK FOR FULL TIMED PAPER):

Handwriting practice lines for the essay response.

Teacher Assessment: Effort: [ 1 • 2 • 3 • 4 • 5 ] | Subject Knowledge: [ 1 • 2 • 3 • 4 ] | Analysis: [ 1 • 2 • 3PEEL Mastery: P E E • 4 ] L

De Fabrica gave surgeons breathtaking anatomical maps, but without antiseptics, knowing where the artery is didn't stop surgical shock.

KT2.4: William Harvey & The Circulation of the Blood (1628)

KEY TOPIC 2.4

TASK 1: PRIOR KNOWLEDGE RETRIEVAL (DO NOW)

Recall Target: 4/4

1. In what year did Andreas Vesalius publish De Humani Corporis Fabrica?  
.....
2. At which famous Italian university did Vesalius serve as professor of surgery?  
.....
3. How many anatomical errors made by Galen did Vesalius identify and correct?  
.....
4. State one specific anatomical error of Galen corrected by Vesalius.  
.....

TASK 2: CORE KNOWLEDGE ANCHOR • HIGH-YIELD GCSE CONCEPTS

**The Heart as a Mechanical Pump:** Influenced by Renaissance mechanical water pumps, Harvey proved the heart is a muscular pump that forces blood into arteries, which returns through veins in a closed, one-way system.

**Disproving Galen's Liver Theory:** Galen taught blood was made in the liver and consumed like fuel. Harvey mathematically calculated the heart pumped 540 pints an hour (more than body weight), proving blood must recirculate.

**Forensic Experiments & Treatment Limits:** Used tight ligatures on arms to prove vein valves only allow blood to flow towards the heart; published De Motu Cordis (1628); yet bloodletting continued because doctors lacked drug cures.

TASK 3: DUAL-TERM ANALYTICAL DISTINCTION

Explain the difference between Galen's theory of **blood consumption** (liver creating blood burned as fuel) and Harvey's **circular recirculation** (closed continuous circuit):  
  
.....  
.....

TASK 4: GCSE SECTION B COMPARATIVE ANALYSIS • Q3 PRACTICE [4 MARKS]

Difference

**Explain one way in which William Harvey's understanding of the circulatory system was different from Galen's theories. [4 marks]**

*Exam Hint: Contrast Galen's idea that blood is made in the liver and consumed as fuel with Harvey's proof of a closed, one-way circulation pumped by the heart.*  
  
.....  
.....  
.....

 **Living Timeline Mission:** Turn back to Pages 2–3 (Key Topic 2.4). In the drawing box, sketch the famous arm ligature experiment showing vein valves and annotate: De Motu Cordis (1628)!

Turn to Pages 2–3

**Explain why William Harvey's discovery of the circulation of the blood was a turning point in medicine. [12 marks]**

### ENQUIRY PLANNING MATRIX • MAP YOUR 3 PARAGRAPHS BEFORE WRITING

## 1. THE HEART AS A MECHANICAL PUMP

## 2. MATHEMATICAL CALCULATION

### 3. RESISTANCE & TREATMENT LIMITS

**[E] Explanation:** Causal mechanism (how & why). **[L] Link:** Evaluate overall historical criteria.

This image shows a single sheet of white paper with horizontal ruling lines. The lines are evenly spaced and run across the width of the page. There are no margins, text, or other markings on the paper.

11/14

KT2.5: Continuity in Treatment & The Great Plague of London (1665)

KEY TOPIC 2.5

TASK 1: PRIOR KNOWLEDGE RETRIEVAL (DO NOW)

Recall Target: 4/4

1. In what year did William Harvey publish De Motu Cordis?
2. Which ancient theory of blood production did Harvey disprove through mathematical calculations?
3. What tiny blood vessels connecting arteries and veins could Harvey NOT see without a microscope?
4. Why did Harvey's discovery of blood circulation have NO immediate effect on medical treatment?

TASK 2: CORE KNOWLEDGE ANCHOR • HIGH-YIELD GCSE CONCEPTS

**The Great Plague Catastrophe (1665):** Swept through overcrowded London, killing roughly 100,000 citizens (20% of the population); bodies collected at night by dead-carts and dumped in mass parish lime pits.

**Civic Plague Orders (Change):** Mayor enforced strict municipal quarantine: infected houses padlocked for 28 days, painted with a red cross and 'Lord have mercy upon us', guarded by watchmen; 200,000 dogs and cats slaughtered.

**Stagnation in Treatment (Continuity):** Physicians had no understanding of rat fleas or bacteria; citizens smoked tobacco and carried pomanders against miasma; apothecaries sold fake 'Plague Water'; bleeding and purging persisted.

TASK 3: DUAL-TERM ANALYTICAL DISTINCTION

Explain the difference between municipal **civic quarantine orders** (watchmen, red crosses, locked houses) and individual **miasmatic pomanders** (herbs, smoking):

TASK 4: GCSE SECTION B COMPARATIVE ANALYSIS • Q3 PRACTICE [4 MARKS]

Difference

Explain one way in which government reactions to the Great Plague of 1665 were different from reactions to the Black Death of 1348. [4 marks]

*Exam Hint:* Contrast the lack of organized municipal action in 1348 with London's 1665 quarantine orders, locked houses, appointed watchmen, and Bills of Mortality.

 **Living Timeline Mission:** Turn back to Pages 2–3 (Key Topic 2.5). In the drawing box, sketch the red cross on a quarantined front door with 'Lord have mercy upon us' and annotate the 28-day watchmen rule!

Turn to Pages 2–3

Why did the Great Plague of 1665 reveal the severe limitations of Renaissance medical progress?

Question 5/6: Evaluative Essay [16+4 marks • 25 mins]

'Approaches to treating and preventing disease during the Great Plague of 1665 showed almost complete continuity with the Black Death of 1348.' How far do you agree? Explain your answer. [16+4 marks]

Edexcel Stimulus Prompts: You may use the following in your answer: • The Four Humours and miasma • Quarantine and watchmen. You must also use information of your own.

ENQUIRY PLANNING MATRIX • MAP YOUR 3 PARAGRAPHS BEFORE WRITING

DRAFT NOTES ↓

1. LOCAL CIVIC ACTION (CHANGE)

Explain how London authorities enforced organized quarantine: padlocking infected houses for 28 days with red crosses ('Lord have mercy upon us'), watchmen, and Bills of Mortality.

2. MEDICAL TREATMENT (CONTINUITY)

Explain how doctors still blamed miasma, God, and the Four Humours: smoking tobacco, holding pomanders, bleeding patients, and taking useless quack 'Plague Water'.

3. EVALUATIVE VERDICT (CRITERIA)

Weigh civic organisation against medical ignorance: government responses became more organized, but medical knowledge of the disease was identical to 1348.

KEY VOCABULARY: The Great Plague (1665) • London Bills of Mortality • searchers of the dead • mass plague pits • parish watchmen • 28-day house quarantine • red cross on doors • 'Lord have mercy upon us' • killing 200,000 dogs and cats

CAUSAL STEMS: On the one hand, responses in 1665 showed change because... • For example, local authorities... • On the other hand, there was complete continuity in... • Overall, while civic methods changed...

[P] Point: Direct factor sentence. [E] Evidence: Specific dates, figures & names. [E] Explanation: Causal mechanism (how & why). [L] Link: Evaluate overall historical criteria.

TASK: USING THE STRUCTURE STRIP ABOVE, WRITE 1-2 DETAILED ANALYTICAL PARAGRAPHS BELOW (CONTINUE IN YOUR EXERCISE BOOK FOR FULL TIMED PAPER):

Handwriting practice lines for the essay response.

Teacher Assessment: Effort: [ 1 • 2 • 3 • 4 • 5 ] | Subject Knowledge: [ 1 • 2 • 3 • 4 ] | Analysis: [ 1 • 2 • 3PEEL Mastery: P E E • 4 ] L
