

YEAR 7 ENQUIRY PUBLIC HEALTH, ENGINEERING & DISEASE • C.43 AD–PRESENT**WATER & SANITATION THROUGH TIME**

Overarching Enquiry: "How did Britain conquer water-borne disease: engineering, science, or government power?"

**PRIMARY CARTOGRAPHY PLATE • SOHO, LONDON (1854)****WELLCOME HISTORICAL MEDICAL COLLECTION****Dr John Snow's Broad Street Cholera Spot Map**

Dr John Snow's famous 1854 spot map of Soho, marking cholera deaths with black bars clustered around the contaminated Broad Street water pump.

PUPIL WORKBOOK & ACADEMIC RECORD**YEAR 7 HISTORY • UNIT 1**

NAME: _____ CLASS: _____ TEACHER: _____

THE 6 HISTORICAL ENQUIRIES ACROSS THIS UNIT**CURRICULUM PROGRESSION**

L1: Roman Britain & Fishbourne Palace: Aqueducts, public thermae, and lead pipes.

L4: Industrial Towns & Chadwick (1842): Slum cellars, sanitary statistics, and laissez-faire.

L2: Medieval Towns & Monasteries: Monastic settling tanks vs town cesspits and gong farmers.

L5: John Snow & The Broad Street Pump: Asiatic cholera, detective spot mapping, and brewery clues.

L3: Early Modern Filth & 1665 Plague: Fleet Ditch, Harington's toilet, and plague doctors.

L6: The Great Stink & Bazalgette's Sewers: Boiling Thames, 82 miles of sewers, and the 1875 Act.

How to use this timeline: As you study each lesson, illustrate the milestone sketchpad with your visual symbol and key notes.

Spine • Facing Left

c.43–410 AD • Roman Aqueducts, Bathhouses & Fishbourne Lead Pipes

LESSON 1

Roman engineers bring stone aqueducts, communal bathhouses, and gravity sewers to Britain. At Fishbourne Palace in Sussex, jointed lead water pipes carry fresh running water into garden pools and private bath suites, though ordinary Britons still rely on muddy streams.

Sketch your visual symbol: The stone arches of a Roman aqueduct or jointed lead pipes stamped with the imperial mark.

c.1100–1350 • Monastic Waterworks vs Medieval Town Squalor

LESSON 2

While medieval towns choke on overflowing cesspits and hire night-time gong farmers, wealthy monasteries build clean water networks. Canterbury monks filter fresh spring water through five settling tanks into washing fountains and flush their infirmery latrines into the river.

Sketch your visual symbol: Monastic settling tanks or a gong farmer carrying barrels of waste at night.

1596–1665 • Tudor Flush Toilets & The 1665 Great Plague

LESSON 3

Sir John Harington invents the flushing water closet in 1596, but without piped water it fails to catch on. When the Great Plague strikes in 1665, authorities lock families behind red crosses and plague doctors wear herb-filled beaks to ward off deadly miasma.

Sketch your visual symbol: The plague doctor's long-beaked mask or the red cross with 'Lord Have Mercy Upon Us'.

Timeline Check: Why did clean water systems collapse when the Romans left Britain, and why were monasteries able to stay so much cleaner than medieval towns?

Turn overleaf for Lesson 1 →

LIVING UNIT TIMELINE • PART 2: INDUSTRIAL REVOLUTION & MODERN HEALTH (1842–1875)

PAGES 2–3 FACING
SPREAD

How to use this timeline: As you study each lesson, illustrate the milestone sketchpad with your visual symbol and key notes.

Spine • Facing
Right

1842–1848 • Chadwick's Sanitary Report & The 1848 Health Act

LESSON 4

Industrial cities grow into death traps of back-to-back terraces and cellar dwellings. Edwin Chadwick's 1842 Report uses mortality statistics to prove filth causes early death, but the 1848 Public Health Act fails because it is voluntary and ratepayers resist taxes.

Sketch your visual symbol: Chadwick's mortality scales (Rutland 38 vs Manchester 17) or slum houses.

1854 • Dr John Snow & The Broad Street Water Pump

LESSON 5

Dr John Snow investigates a sudden cholera outbreak in Soho. By plotting deaths on a street map and discovering that brewery workers were spared, he proves cholera is water-borne and persuades parish officials to remove the Broad Street pump handle.

Sketch your visual symbol: The iron Broad Street pump with its handle removed, or the Soho spot map.

1858–1875 • The Great Stink & Bazalgette's Underground Sewers

LESSON 6

The blazing heat of June 1858 turns the Thames into a toxic sewer, forcing MPs to act. Joseph Bazalgette builds 82 miles of underground brick sewers. In 1875, the Public Health Act finally makes clean water and sanitation compulsory by law.

Sketch your visual symbol: Bazalgette's egg-shaped brick sewer or the 1875 Public Health Act scroll.

Timeline Check: Which was the bigger breakthrough in conquering water-borne disease: Dr John Snow proving the cause in 1854, or Bazalgette building the sewers in 1858?

Use for
revision →

"Clean water is not an accident of nature; it is a triumph of engineering and public health."

3/16

L1: How did Roman engineering transform clean water and public health?

WHAT WE ARE LEARNING TODAY:

- Understand how Roman aqueducts and gravity conduits transported freshwater into towns.
- Explore the hygiene and social role of public bathhouses (thermae) and latrines.
- Discover why Roman lead pipes at Fishbourne Palace were an engineering wonder.

TASK 1: 'DO NOW' RETRIEVAL PRACTICE (5 PRIOR RECALL QUESTIONS)

Score: [/ 5]

Q1: What kind of houses did Celtic Britons live in before AD 43?

.....

.....

Q2: Why did Iron Age farming villages produce very little concentrated sewage?

.....

.....

Q3: Where did pre-Roman Britons get their fresh drinking water?

.....

.....

Q4: What branch of history studies buried ruins, coins, and artifacts?

.....

.....

Q5: In what year did Emperor Claudius invade Britain?

.....

.....

TASK 2: KEY VOCABULARY

Core Definitions

Explain the difference between an **Aqueduct** (a bridge or channel carrying fresh spring water) and a **Cesspit** (a pit dug in the ground for collecting waste):

TASK 3: SOURCE INVESTIGATION — ROMAN LEAD WATER PIPES AT FISHBOURNE PALACE

PRIMARY EVIDENCE

ARCHAEOLOGICAL EXCAVATION PLATE: ROMAN LEAD WATER PIPES AT FISHBOURNE

“Excavations at Fishbourne Roman Palace revealed a sophisticated water system dating to c.75 AD. Fresh spring water was piped over miles through jointed lead pipes and clay conduits to feed a monumental garden pool, fountains, and a luxury private bathhouse with heated floors and stone sewers flushing waste away.”

Record: SUSSEX ARCHAEOLOGICAL SOCIETY • FISHBOURNE EXCAVATIONS

READING CLUES:

- ① **Underline:** the luxury features supplied with fresh water at Fishbourne. ② **Circle:** the material used to make the water pipes (lead). ③ **Box:** the date of the Fishbourne water system (c.75 AD).

Question 1: What does this archaeological find prove about the skills of Roman engineers in Britain?

.....

.....

.....

.....

Question 2: Why was this level of clean water technology only enjoyed by the rich and powerful?

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

Helpful Clue: Look at the jointed lead pipes. Romans understood metal casting and water pressure, but ordinary villagers carried water in

Challenge Question: Did Roman water systems collapse after AD 410 because people forgot the technology, or because the government

EXTENDED WRITING

DRAFT QUICK BULLET POINTS BELOW ↓

3. YOUR CONCLUSION

Did Romans build water systems for public health, or for imperial power and luxury?

Sentence Starters: The most impressive Roman achievement was... • For example, at Fishbourne Palace... • However, public health was limited because... • In conclusion...

[P] Point: Clear sentence answering the question. **[E] Evidence:** Names, dates, places, and statistics. **[E] Explain:** How and why this affected public health. **[L] Link:** Direct conclusion answering enquiry.

Turn to Pages 2–3 (Milestone 1: c.43–410 AD). In the sketchpad, draw the stone arches of a Roman aqueduct or jointed lead water pipes stamped with the imperial mark.

WHAT WE ARE LEARNING TODAY:

- Contrast living conditions in crowded, muddy medieval towns with clean, orderly monasteries.
- Investigate the work of gong farmers, cesspits, and town court fines for dumping waste.
- Understand how the Black Death (1348) challenged medieval ideas about health and disease.

Score: [/ 5]

Q1: What happened to Roman aqueducts and baths after the legions left in AD 410?	Q2: Which famous Roman palace in Sussex had running water and lead pipes?	Q3: Did Romans know that microscopic bacteria caused diseases like cholera?	Q4: What word describes water flowing downhill using its natural weight?	Q5: Why did Roman soldiers and governors love spending hours in public bathhouses?
.....				
.....				

Core Definitions

Explain the difference between **Miasma** (the mistaken belief that bad smells cause disease) and a **Gong Farmer** (a worker paid to shovel waste out of cesspits at night):

PRIMARY EVIDENCE

**SOURCE B: WATERWORKS PLAN OF CHRIST CHURCH PRIORY,
CANTERBURY (C.1165)**

"1312: John le Ropere is fined two shillings for keeping a rotting dung-heap in the public street... 1421: Inquest of Winchester: John Hende has allowed his cesspit to overflow into the King's ditch, polluting water where women wash clothes."

"Drawn by Monk Wibert: Fresh spring water is collected outside Canterbury, passed through five settling tanks to remove sand and mud, piped underground into the monks' washing cloister, and flushed through latrines into the river."

HAMPSHIRE & NORFOLK RECORD OFFICES • COURT ROLLS

TRINITY COLLEGE CAMBRIDGE • EADWINE PSALTER

① **Underline**: the fine John le Ropere paid for his dung-heap in Source A. ② **Circle**: the 5 settling tanks used by monks to filter water in Source B. ③ **Box**: what happened when John Hende's cesspit overflowed into the ditch.

Question 1: What do these sources prove about why monks lived longer, healthier lives than townspeople?

Question 2: Why did medieval town councils struggle to keep streets clean even when they fined polluters?

[illegible]

Challenge Question: If townspeople believed bad smells caused plague, why did they still dump animal guts in the street?

Task 4: Extended Enquiry • Was medieval town filth caused by a lack of money, or by mistaken medical beliefs like miasma?

PLANNING YOUR ANSWER: 3 KEY ARGUMENTS

1. TOWN SQUALOR

Overflowing cesspits, roaming pigs, butchers dumping offal, and night-time gong farmers.

2. MONASTIC CLEANLINESS

Settling tanks, lead conduits, running water fountains, and isolated cloisters.

3. YOUR CONCLUSION

Did towns fail because of poverty and weak government, or because miasma led them astray?

Key Words: Gong Farmer • Cesspit • Miasma • Settling Tank • Conduit • Black Death (1348) • Court Leet • Monks

Sentence Starters: Medieval towns were desperately dirty because... • In sharp contrast, monasteries stayed clean by... • When plague struck in 1348, people believed... • Therefore, I conclude that...

[P] Point: Clear sentence answering the question.

[E] Evidence: Names, dates, places, and statistics.

[E] Explain: How and why this affected public health.

[L] Link: Direct conclusion answering enquiry.

TIMELINE MISSION • PAGES 2–3
Turn to Pages 2–3 (Milestone 2: 1100–1350). In the sketchpad, sketch the Canterbury waterworks with its settling tanks, or a gong farmer carrying barrels of waste at night.

L3: How did London’s growth create deadly filth, and how did people react to the 1665 Great Plague?

WHAT WE ARE LEARNING TODAY:

- Explain how London's population boom created open sewer ditches like the Fleet Ditch.
- Investigate Sir John Harington's 1596 invention of the flushing toilet (the "Ajax").
- Evaluate how authorities fought the 1665 Great Plague with red crosses, watchmen, and plague doctors.

TASK 1: 'DO NOW' RETRIEVAL PRACTICE (5 PRIOR RECALL QUESTIONS)

Score: [/5]

Q1: What night-workers were paid to empty human waste from medieval cesspits?

.....

.....

Q2: What was the Latin word for bad, poisonous air that people blamed for illness?

.....

.....

Q3: In what year did the Black Death first hit Britain?

.....

.....

Q4: Name one way monks filtered their drinking water in medieval monasteries.

.....

.....

Q5: Why were pigs and butchery offal banned from medieval town streets?

.....

.....

TASK 2: KEY VOCABULARY

Core Definitions

Explain the difference between **Quarantine** (locking people inside their homes to stop disease spreading) and **Miasma** (believing disease came from foul smells):

.....

TASK 3: SOURCE INVESTIGATION — THE PLAGUE DOCTOR & THE 1665 LONDON PLAGUE ORDERS

PRIMARY EVIDENCE

HISTORICAL VISUAL: THE 17TH-CENTURY PLAGUE DOCTOR COSTUME

“Every visited house shall be shut up with a red cross marked upon the middle of the door a foot long, with these words in capital letters: ‘LORD HAVE MERCY UPON US.’ And a watchman shall stand day and night before the door, to keep the people from coming forth... All dogs and cats shall immediately be destroyed by the dog-killer.”

Record: LONDON METROPOLITAN ARCHIVES • ORDERS OF THE LORD MAYOR (1665)

READING CLUES:

① **Underline:** the words painted in red on infected houses.

② **Circle:** the animals ordered to be killed immediately.

③ **Box:** who stood outside the door day and night.

Question 1: What was the aim of locking families inside their homes with a watchman outside?

.....

.....

.....

.....

Question 2: Why did killing thousands of pet dogs and cats accidentally make the plague much worse?

.....

.....

.....

.....

.....

.....

.....

.....

Helpful Clue: Remember that plague fleas lived on black rats. When people killed cats and dogs, the rat population exploded and spread the fleas everywhere!

Challenge Question: How does the plague doctor’s herb-filled beak prove that doctors in 1665 still had no idea what truly caused disease?

SOURCE A: THE LORD MAYOR'S LONDON PLAGUE ORDERS (1665)

"Every visited house shall be shut up with a red cross marked upon the middle of the door, with these words: 'LORD HAVE MERCY UPON US.' A watchman shall stand day and night before the door, to keep the people from coming forth. All dogs and cats shall immediately be killed."

Record: LONDON METROPOLITAN ARCHIVES • 1665 GUILDHALL PAPERS

Year 7 Clue: Official government rules showing how the city tried to quarantine sick families by force.

SOURCE B: DR NATHANIEL HODGES, EYEWITNESS DOCTOR IN LONDON (1665)

"The shut-up houses became living graves. We wore long leather robes and beaks stuffed with sweet herbs to ward off the foul miasma in the air, yet still the pestilence devoured whole streets. Killing the dogs and cats was madness, for the black rats multiplied without check."

Record: ROYAL COLLEGE OF PHYSICIANS • LOIMOLOGIA (1672)

Year 7 Clue: Eyewitness diary from a real doctor proving they believed in miasma and did not understand fleas and germs.

DRAFT QUICK BULLET POINTS BELOW ↓

Sentence Starters: Source A is useful for showing that London authorities used quarantine because... • However, it only shows the official rules, not whether people obeyed them. • In contrast, Source B is useful because Dr Hodges was an eyewitness who saw... • Together, both sources are valuable because they prove...

[U] Utility: How useful is it for our enquiry?

[illegible]

"When assessing source utility, always ask: what does it reveal, who created it, and what are its limits?"

L4: Why did Victorian industrial cities become death traps, and how did Chadwick fight back?

WHAT WE ARE LEARNING TODAY:

- Explore living conditions in cramped back-to-back slum housing and damp cellar dwellings.
- Analyze Edwin Chadwick's 1842 Sanitary Report and his shocking life-expectancy statistics.
- Understand why the 1848 Public Health Act failed because of "laissez-faire" attitudes.

TASK 1: 'DO NOW' RETRIEVAL PRACTICE (5 PRIOR RECALL QUESTIONS)

Score: [/ 5]

Q1: What symbol was painted on doors during the 1665 Great Plague? 	Q2: Who invented the first flushing toilet for Queen Elizabeth I in 1596? 	Q3: Why did the first flushing toilet fail to improve health for ordinary people? 	Q4: What open London sewer ditch was famous for dead dogs and rotting waste? 	Q5: What French phrase describes the government belief in "leaving things alone"?
---	--	--	---	--

TASK 2: KEY VOCABULARY

Core Definitions

Explain the difference between **Laissez-faire** (the belief that government should not interfere in business or health) and **Public Health** (government action to provide clean water and sewers for everyone):

TASK 3: SOURCE INVESTIGATION — CHADWICK'S 1842 REPORT ON THE SANITARY CONDITION OF WORKERS

PRIMARY EVIDENCE

SOURCE C: LIFE EXPECTANCY BY SOCIAL CLASS AND LOCATION (CHADWICK'S 1842 STATISTICS)

BRITISH PARLIAMENTARY PAPERS • CHADWICK REPORT (1842)

"The hard arithmetic of disease: The average age of death of a labourer in rural Rutland was 38 years; in industrial Manchester, it was just 17 years. In Liverpool, over half of all working-class children died before their fifth birthday, poisoned by stagnant cesspools beneath cellar floors."

District / Social Class	Gentry & Professional	Tradesmen & Shopkeepers	Artisans & Labourers
Rural Rutland (Farming county)	52 years	41 years	38 years
Leeds (Industrial textile city)	44 years	27 years	19 years
Manchester (Cotton factory capital)	38 years	20 years	17 years
Liverpool (Major seaport & slums)	35 years	22 years	15 years

READING CLUES:

① **Underline:** the average age of death for a labourer in Manchester (17 years).

② **Circle:** the age of death for a labourer in farming Rutland (38 years).

③ **Box:** what poisoned children under five in Liverpool cellar dwellings.

Question 1: Using the table, explain why moving from the countryside to a factory city halved a worker's life:

Question 2: How did Chadwick use these statistics to argue that cleaning up slums would save taxpayers money?

Helpful Clue: Chadwick argued that sick workers could not work, meaning

Challenge Question: Why did wealthy ratepayers denounce

PLANNING YOUR ANSWER: 3 KEY ARGUMENTS		DRAFT QUICK BULLET POINTS BELOW ↓
1. INDUSTRIAL SQUALOR Cellar dwellings, back-to-back terraces, shared outdoor privies, and cesspool leaks. 	2. CHADWICK'S EVIDENCE 1842 Report, statistics proving dirt caused early death, and economic arguments. 	3. YOUR CONCLUSION Did the 1848 Public Health Act fail because it was voluntary, or did ratepayers hate spending money?

[P] Point: Clear sentence answering the question.	[E] Evidence: Names, dates, places, and statistics.	[E] Explain: How and why this affected public health.	[L] Link: Direct conclusion answering enquiry.
--	--	--	---

This image shows a blank sheet of white paper with horizontal ruling lines. The lines are evenly spaced and run across the width of the page. There are no margins, text, or other markings on the paper.

"Support your explanation with named people, dates, and historical facts."

L5: How did Dr John Snow prove that cholera was spread by contaminated drinking water?

WHAT WE ARE LEARNING TODAY:

- Understand the terrifying symptoms and rapid spread of Asiatic Cholera in Victorian Britain.
- Investigate how Dr John Snow mapped cholera deaths around the Broad Street water pump in Soho (1854).
- Discover why brewery workers survived, and why removing the pump handle was a turning point.

TASK 1: 'DO NOW' RETRIEVAL PRACTICE (5 PRIOR RECALL QUESTIONS)

Score: [/5]

Q1: In what year did Edwin Chadwick publish his famous Sanitary Report? 	Q2: What was the average life expectancy of a Manchester worker in 1842? 	Q3: Why did most councils ignore the 1848 Public Health Act? 	Q4: What deadly bacterial water disease first invaded Britain in 1831? 	Q5: What theory said illness was spread by foul stench and rotting mist?
---	--	--	--	--

TASK 2: KEY VOCABULARY

Core Definitions

Explain the difference between **Water-Borne Disease** (illness spread by drinking contaminated water) and **Miasma Theory** (the belief that bad smells spread sickness):

TASK 3: SOURCE INVESTIGATION — DR JOHN SNOW'S BROAD STREET CHOLERA SPOT MAP (1854)

PRIMARY EVIDENCE

PRIMARY CARTOGRAPHY: DR JOHN SNOW'S 1854 SPOT MAP OF SOHO

"Within 250 yards of the Broad Street pump, 500 deaths occurred in ten days. Nearby, at the Lion Brewery, none of the 70 workers died—they were given free beer and never drank pump water. At the workhouse with its own deep well, only 5 of 535 inmates caught cholera. On 7 September 1854, the pump handle was removed."

Record: WELLCOME HISTORICAL MEDICAL COLLECTION • SNOW MONOGRAPH (1855)

READING CLUES:

- ① **Underline:** what happened to the 70 workers at the Lion Brewery. ② **Circle:** the date the Broad Street pump handle was removed (7 September 1854). ③ **Box:** the number of deaths within 250 yards of the pump (500 deaths).

Question 1: Why were the brewery workers and workhouse inmates the vital clues that solved the mystery?

Question 2: Why did doctors continue to believe in miasma for thirty years after Snow removed the pump handle?

Helpful Clue: Brewery workers drank boiled beer; workhouse inmates had their own private deep well. If bad smells in the air caused cholera, everyone would have died!

Challenge Question: How did John Snow's map create the modern science of epidemiology (tracking disease outbreaks)?

SOURCE A: DR JOHN SNOW, ON THE MODE OF COMMUNICATION OF CHOLERA (1855) <i>“Within 250 yards of the Broad Street pump, 500 fatal attacks occurred in 10 days. Yet in the Lion Brewery in Broad Street, where 70 workmen were employed, not one died of cholera. Mr Huggins informed me that the men were allowed free beer and never drank pump water. At the Eley factory, workers drank water carried from Broad Street—and scores died.”</i> Record: WELLCOME HISTORICAL MEDICAL COLLECTION • SNOW REPORT (1855) Year 7 Clue: Scientific detective proof comparing beer drinkers and pump water drinkers to pinpoint the contaminated well.	SOURCE B: GENERAL BOARD OF HEALTH OFFICIAL REPORT ON CHOLERA (1854) <i>“We see no reason to adopt Dr Snow’s belief that cholera is propagated through drinking water. The disease is caused by poisonous exhalations rising from decomposing filth and foul drains in overcrowded lanes. The impure atmosphere, especially in warm summer nights, poisons the blood of those breathing it.”</i> Record: BRITISH PARLIAMENTARY PAPERS • REPORT ON CHOLERA OUTBREAK Year 7 Clue: Official government report proving top Victorian doctors stubbornly defended miasma theory despite Snow’s proof.
--	--

DRAFT QUICK BULLET POINTS BELOW ↓

How do both sources prove that even with solid evidence, Victorians struggled to abandon miasma theory?

Sentence Starters: Source A is highly useful for proving that cholera was water-borne because Dr Snow discovered... • However, Source A does not explain why other doctors doubted him. • In contrast, Source B is useful because the Board of Health reveals that authorities still believed... • Together, both sources are valuable because they show that scientific breakthroughs...

[U] Utility: How useful is it for our enquiry?

"Explain how evidence disproved old ideas like miasma and led to modern science."

L6: How did the Great Stink of 1858 finally force Parliament to build London's mega-sewers?

WHAT WE ARE LEARNING TODAY:

- Understand how flush toilets emptied into the River Thames, turning it into a boiling open sewer.
- Investigate the Great Stink of June 1858 and how MPs soaked curtains in lime to breathe in Parliament.
- Discover how Sir Joseph Bazalgette built 82 miles of brick sewers, leading to the 1875 Public Health Act.

TASK 1: 'DO NOW' RETRIEVAL PRACTICE (5 PRIOR RECALL QUESTIONS)

Score: [/ 5]

Q1: Which Soho street pump was identified by Dr John Snow as the source of cholera in 1854?

.....

.....

Q2: Why did the 70 workers at the Lion Brewery survive the cholera outbreak?

.....

.....

Q3: What action did officials take on 7 September 1854 to stop the Soho cholera epidemic?

.....

.....

Q4: Did doctors immediately believe John Snow's water theory in 1854?

.....

.....

Q5: What major river runs through London that had become an open sewer by the 1850s?

.....

.....

TASK 2: KEY VOCABULARY

Core Definitions

Explain the difference between an **Intercepting Sewer** (a giant pipe that catches sewage before it hits the river and carries it far away) and **Compulsory Legislation** (a law that forces councils to build clean water systems):

.....

TASK 3: SOURCE INVESTIGATION — BUILDING JOSEPH BAZALGETTE'S BRICK SEWERS (C.1860S)

PRIMARY EVIDENCE

ENGINEERING ARCHIVE PLATE: CONSTRUCTION OF EGG-SHAPED BRICK SEWERS BENEATH LONDON

"In June 1858, a blazing heatwave turned the River Thames into a bubbling stew of human waste. In the House of Commons, MPs fled the library holding scented handkerchiefs, and committee rooms were soaked in chloride of lime. Within 18 days, Parliament abandoned fifty years of excuses, passing a bill granting £3 million for Chief Engineer Joseph Bazalgette to build 82 miles of intercepting brick sewers."

Record: INSTITUTION OF CIVIL ENGINEERS • BAZALGETTE PAPERS (1860)

READING CLUES:

① **Underline:** what MPs held over their faces when trying to work in Parliament.

② **Circle:** the number of days it took Parliament to pass the sewer law (18 days).

③ **Box:** the total length of underground intercepting brick sewers (82 miles).

Question 1: What does this source reveal about why politicians finally acted after ignoring slums for fifty years?

.....

.....

.....

Question 2: How did Bazalgette's egg-shaped sewers and Portland cement permanently wipe out cholera in London?

.....

.....

.....

.....

.....

.....

.....

.....

Helpful Clue: For decades, poor children died in cellars and MPs said taxes were too high. When MPs themselves couldn't breathe in their own debating chamber, money was approved in 18 days!

Challenge Question: How did Bazalgette's sewers pave the way for the 1875 Public Health Act, making clean water a legal right in Britain?

PLANNING YOUR ANSWER: 3 KEY ARGUMENTS		DRAFT QUICK BULLET POINTS BELOW ↓
1. THE GREAT STINK Summer 1858 heatwave, Thames boiling with sewage, and MPs fleeing the chamber.	2. MEGA-ENGINEERING 318 million bricks, 82 miles of sewers, Portland cement, and gravity flow to the sea.	3. YOUR CONCLUSION Did cholera end because of science, heroic engineering, or politicians protecting themselves?

Did cholera end because of science, heroic engineering, or politicians protecting themselves?

Sentence Starters: For decades, Parliament refused to spend money on sewers because of laissez-faire, but in June 1858... • The Great Stink forced politicians to act because... • Bazalgette's underground engineering was a triumph because... • Ultimately, I conclude that...

This image shows a full page of white paper with horizontal blue ruling lines. The lines are evenly spaced and run across the width of the page, providing a template for handwriting practice or general writing. There are no margins, text, or other markings on the page.

"Joseph Bazalgette built 82 miles of sewers that still keep London healthy today."
