

Guide 01: The Tripartite Curriculum Model

Architecture & Separation of Concerns: Textbooks, Workbooks & The Digital App

Executive Summary: The History Revision Hub operates on a strict **Tripartite Model** designed to eliminate cognitive friction, prevent question numbering desynchronization, and drastically reduce school reprographics costs. By separating reading material from pupil writing and interactive quizzing, each document fulfills a singular disciplinary purpose.

 THE TEXTBOOK (CLASSROOM SET) Role: The permanent, timeless reading anthology. Key Features: • Authoritative 4-act Christine Counsell disciplinary narrative. • Two-column layout (50–65 char measure) to prevent eye-sweep fatigue. • Left-margin line numbering (every 5 lines) for precise teacher signposting. • Archival source plaques with museum shelfmarks and provenance. • ZERO task lines, ZERO Do-Now blanks. • Reused year after year; never scribbled in or discarded.	 THE PUPIL WORKBOOK (CONSUMABLE) Role: The 16-page consumable termly writing pack. Key Features: • The <i>only</i> document where pupils write answers. • Pre-numbered tasks (Q1, Q2, Q3...) strictly aligned to digital app. • Do-Now prior-learning recall grids and vocabulary challenges. • Scaffolded exam writing with criteria stems and model answers. • Audited to 99% page utilization with 0px overflow. • Printed per student each term as a saddle-stitched booklet.	 THE DIGITAL APP (INTERACTIVE HUB) Role: The interactive revision and multimedia engine. Key Features: • Self-marking recall quizzes with instant formative feedback. • Flashcard decks with morphological etymology. • Interactive chronologies, map sliders, and satellite views. • Masterpiece Studio: 2.5x Loupe inspection and detective riddles. • Audio read-aloud synthesizers for accessible whole-class reading.

WHY THIS SOLVED THE "SEPTEMBER NUMBERING DESYNCHRONIZATION" CRISIS

In legacy setups, questions were printed in both the textbook and the workbook. Any editorial change shifted question numbering (e.g. Question 3 becoming Question 4), breaking synchronization with printed student packs. Under the Tripartite Model:

The Golden Rule of Indexing: The Textbook NEVER contains question numbers. Question numbering lives *canonically and exclusively* within the Pupil Workbook and Digital App. Because the textbook is purely indexed by paragraph references (e.g. [1.1], [2.2]) and source letters (Source A, Source B), it can never drift out of numerical alignment.
