PUPIL NAME: _____ CLASS: _____ TEACHER: _____

KEY TOPIC 2 • C1500–C1700

The Medical Renaissance in England

Humanism, The Anatomical Revolution, and The Persistence of Ancient Dogma

Primary Visual Evidence: *Andreas Vesalius Performing Human Dissection at Padua* (Frontispiece of *De Fabrica*, 1543) CONTEMPORARY PRINT ARCHIVE

1. COMPARISON DRILLS [4M]
Q3: Explain one similarity or difference between eras. Specific factual detail + direct comparative reasoning (5 mins).

2. CAUSAL ANALYSIS [12M]
Q4: Explain why change or continuity occurred. 3 structured PEE paragraphs using 2 stimulus points + own knowledge (15 mins).

3. THEMATIC ESSAY [16M+4M]
Q5/Q6: 'How far do you agree?' Judgement essay balancing factors across broad time periods + SPaG criteria (25 mins).

COURSE SPECIFICATION • KEY ENQUIRY SEQUENCE	LEARNT	REVISED
Key Topic 2.1: The New Spirit of Enquiry: Humanism, The Printing Press & The Royal Society *How did movable type printing and the scientific method challenge 1,500 years of clerical medical dogma?*	☐	☐
Key Topic 2.2: Thomas Sydenham & The Art of Bedside Observation (1676) *Why was Sydenham nicknamed 'The English Hippocrates', and how did his disease classification revolutionize diagnosis?*	☐	☐
Key Topic 2.3: Andreas Vesalius & The Anatomical Revolution (1543) *How did direct human dissection in De Fabrica disprove 300+ Galenic errors, and why did it fail to cure disease?*	☐	☐
Key Topic 2.4: William Harvey & The Circulation of the Blood (1628) *How did mathematical calculation and ligature experiments prove that blood circulates rather than being burned as fuel?*	☐	☐
Key Topic 2.5: Case Study: Continuity in Treatment & The Great Plague of London (1665) *How did civic quarantine orders change municipal response, and why did treatment show complete continuity with 1348?*	☐	☐

LIVING TIMELINE • PART 1: HUMANISM & THE ANATOMICAL REVOLUTION (1440–1660)

Instructions: As you study each enquiry lesson, complete the timeline missions by sketching and annotating in the corresponding Key Topic boxes below.

1440 • Johannes Gutenberg: Movable Metal Type Printing Press

Key Topic 2.1

Gutenberg invents movable metal type in Mainz (introduced to England by Caxton in 1476). Shatters Church monopoly on medical manuscript copying. Enables rapid mass-production of identical medical texts and anatomical diagrams without copyist errors.

1543 • Andreas Vesalius: De Humani Corporis Fabrica & Padua Dissections

Key Topic 2.3

Vesalius personally conducts human dissections at Padua, correcting over 300 Galenic anatomical errors (e.g. human lower jaw is one bone not two). Masterfully illustrated by Titian's workshop and mass-printed, creating the foundation of modern anatomy.

1628 • William Harvey: De Motu Cordis & Circulation of the Blood

Key Topic 2.4

Harvey mathematically calculates the volume of blood pumped per hour (540 pints), proving blood circulates continuously through arteries and veins. Disproves Galen's 1,400-year theory that blood is consumed as fuel manufactured by the liver.

1660 • The Royal Society: Nullius in Verba & Scientific Peer Review

Key Topic 2.1

Founded under royal patronage (Charles II). Operating under the motto Nullius in Verba ('Take nobody's word for it'), it establishes the empirical scientific method, publishing Philosophical Transactions (1665) to share peer-reviewed laboratory research across Europe.

Vesalius proved the human jawbone is one piece, not two like a dog's. Galen had a lot of explaining to do.

LIVING TIMELINE • PART 2: OBSERVATION, PLAGUES & THE MICROSCOPIC WORLD (1665–1676)

Instructions: Complete the timeline sketches and notes as you master each enquiry lesson.

1665 • Robert Hooke: Micrographia & Discovery of Plant Cells

Key Topic 2.1

Hooke uses compound microscopes to examine cork tissue, coining the term 'cell'. His stunning fold-out engravings of fleas and insects shock the public, demonstrating that visible nature contains an unseen microscopic architecture.

1665 • The Great Plague of London: Civic Quarantine & Bills of Mortality

Key Topic 2.5

The plague kills 100,000 Londoners. The Mayor enforces strict municipal orders: infected houses padlocked for 28 days with red crosses; parish watchmen guard doors; mass plague pits dug; yet treatments (bleeding, tobacco) remain identical to 1348.

1676 • Thomas Sydenham: Observationes Medicae & Bedside Observation

Key Topic 2.2

The 'English Hippocrates' urges doctors to abandon theoretical books and study living symptoms at the bedside. Classifies diseases into distinct biological species (distinguishing scarlet fever from measles); prescribes cool regimes for smallpox and cinchona bark for malaria.

1676 • Antonie van Leeuwenhoek: Discovery of 'Animalcules' (Bacteria)

Key Topic 2.1

Using precision single-lens microscopes magnifying up to 300x, Leeuwenhoek discovers living microorganisms in rainwater and dental plaque. Yet without understanding that microbes cause illness, the discovery saves zero lives until Pasteur in 1861.

KT2.1: The New Spirit of Enquiry: Humanism, The Printing Press & The Royal Society

KNOWLEDGE RETRIEVAL • KEY VOCABULARY • EXAM PRACTICE

• 'DO NOW' RETRIEVAL DRILL (10 RECALL QUESTIONS)

Score: [/ 10]

1. In what century did Hippocrates live and teach in Ancient Greece?

2. Name the four bodily fluids identified in Hippocratic medicine.

3. Which ancient Roman physician expanded this into the Theory of Opposites?

4. Why did the medieval Catholic Church actively protect Galen's medical ideas?

5. What Latin term refers to foul-smelling air blamed for causing epidemic disease?

6. In what year did the Black Death first arrive in England?

7. Which Franciscan friar was imprisoned in 1277 for urging scientific experiments?

8. What glass flask was used by medieval physicians to inspect urine?

9. What was the primary guiding principle of medieval monastic hospitals?

10. Name one humoural treatment used by medieval physicians to purge excessive blood.

• KEY VOCABULARY TASK

TERMINOLOGY

Define **The Royal Society (1660)** and explain how its motto **Nullius in Verba** challenged medieval clerical authority:

• QUESTION 3(A): EXPLAIN ONE SIMILARITY [4 MARKS]

[4 MARKS • 5 MINS]

Explain one way in which ideas about the cause of disease in the Renaissance (c1500–c1700) were similar to ideas in the Medieval period (c1250–c1500). [4 marks]

Target: AO1/AO2 [4 marks] • Identify 1 valid similarity (1 mark) • Explain with precise historical detail from both named eras (3 marks).

Sentence Stems: *One way in which they were similarity was that... • Specifically, in the earlier period... • In the same way, in the later period...*

• QUESTION 3(B): EXPLAIN ONE DIFFERENCE [4 MARKS]

[4 MARKS • 5 MINS]

Explain one way in which the communication of medical ideas in the Renaissance was different from the Medieval period. [4 marks]

Target: AO1/AO2 [4 marks] • Identify 1 valid difference (1 mark) • Explain with precise historical detail from both named eras (3 marks).

Sentence Stems: *One way in which they were difference was that... • Specifically, in the earlier period... • In contrast, in the later period...*

Printing meant medical books spread across Europe in weeks instead of centuries. Unfortunately, bad medical advice spread just as quickly.

Question 4: Explain Why [12 marks • 15 mins]

Explain why there were changes in the way ideas about the causes of disease and illness were communicated in the period c1500–c1700. [12 marks]

Stimulus: The printing press (c1440/1476) | The Royal Society (1660/1662) *(You must also use information of your own)*

STRUCTURE STRIP • 3 DISTINCT ANALYTICAL PARAGRAPHS (1 box = 1 full paragraph: Stimulus 1 + Stimulus 2 + Own Knowledge)

PARAGRAPH 1: PRINTING PRESS [STIMULUS 1]	PARAGRAPH 2: THE ROYAL SOCIETY [STIMULUS 2]	PARAGRAPH 3: LIMITS OF SPREAD [OWN KNOWLEDGE]
Explain how Gutenberg's movable-type press (c1440/Caxton 1476) took book production from Church scribes, ending censorship and hand-copying distortions.	Explain how the 1662 Royal Charter, motto Nullius in Verba, and Philosophical Transactions (1665) established the empirical scientific method.	Evaluate the paradox: books remained Latin luxury items for the wealthy; ordinary people still believed in miasma and the Four Humours.

ANALYTICAL CONNECTIVES:
A primary catalyst for change was... • In particular, new technology enabled... • Furthermore, institutional support expanded because... • However, the wider impact was limited because... • Consequently...

KEY VOCABULARY BANK:
Gutenberg press (c1440) • William Caxton (1476) • clerical monopoly • vernacular translations • Royal Society (1660) • Royal Charter (1662) • Nullius in Verba • Philosophical Transactions (1665) • peer review • animalcules • Robert Hooke (1665)

Task: *Write your Paragraph 1 response below, then continue Paragraphs 2, 3, and your final Evaluative Verdict on Pages 6–7:*

TIMELINE MISSION Turn to Pages 2–3 (Key Topic 2.1). In the drawing box, sketch Gutenberg's screw press producing identical anatomical plates and annotate the Royal Society's motto: 'Nullius in Verba' (Take nobody's word for it)!

← Pages 2–3

The Royal Society motto Nullius in Verba translates to 'Take nobody's word for it'—the exact opposite of your teacher during exam revision.

MARGIN	*[Extended Response • Paragraph 2 / Further Disciplinary Notes]*

MARGIN	*[Extended Response Continued • Paragraph 3 & Sustained Conclusion]*

KT2.2: Thomas Sydenham & The Art of Bedside Observation (1676)

KNOWLEDGE RETRIEVAL • KEY VOCABULARY • EXAM PRACTICE

• 'DO NOW' RETRIEVAL DRILL (10 RECALL QUESTIONS)

Score: [/ 10]

1. In what year did Johannes Gutenberg invent the movable metal type printing press?

2. In what year did William Caxton introduce the first printing press to England?

3. How did the printing press break the Catholic Church's clerical monopoly on books?

4. In what year was the Royal Society formally founded in London?

5. What was the Latin motto of the Royal Society, meaning 'Take nobody's word for it'?

6. Name the world's first peer-reviewed scientific journal, published in 1665.

7. Who published Micrographia in 1665 featuring detailed microscopic illustrations?

8. What term did Antonie van Leeuwenhoek give to microscopic bacteria in 1676?

9. Why did optical discoveries of microbes save zero lives in the Renaissance?

10. Which ancient Greek physician originated the clinical observation of patients?

• KEY VOCABULARY TASK

TERMINOLOGY

Define **Bedside Observation** and explain how Sydenham's concept of **Disease Species** differed from humoural theory:

• QUESTION 3(A): EXPLAIN ONE DIFFERENCE [4 MARKS]

[4 MARKS • 5 MINS]

Explain one way in which Thomas Sydenham's approach to diagnosis was different from medieval physicians. [4 marks]

Target: AO1/AO2 [4 marks] • Identify 1 valid difference (1 mark) • Explain with precise historical detail from both named eras (3 marks).

Sentence Stems: *One way in which they were difference was that... • Specifically, in the earlier period... • In contrast, in the later period...*

• QUESTION 3(B): EXPLAIN ONE SIMILARITY [4 MARKS]

[4 MARKS • 5 MINS]

Explain one way in which medical treatments prescribed by Thomas Sydenham were similar to medieval treatments. [4 marks]

Target: AO1/AO2 [4 marks] • Identify 1 valid similarity (1 mark) • Explain with precise historical detail from both named eras (3 marks).

Sentence Stems: *One way in which they were similarity was that... • Specifically, in the earlier period... • In the same way, in the later period...*

Sydenham told young doctors: 'Go to the bedside, there alone can you learn disease.' Put down the Greek textbook, look at the patient!

Question 4: Explain Why [12 marks • 15 mins]

Explain why Thomas Sydenham was significant in the development of medicine in Britain. [12 marks]

Stimulus: Observationes Medicae (1676) | Classifying diseases into species *(You must also use information of your own)*

STRUCTURE STRIP • 3 DISTINCT ANALYTICAL PARAGRAPHS (1 box = 1 full paragraph: Stimulus 1 + Stimulus 2 + Own Knowledge)

PARAGRAPH 1: BEDSIDE EMPIRICISM [OWN KNOWLEDGE]
Explain how Sydenham insisted on closely monitoring symptoms at the patient's bedside, rejecting Galenic book-learning and complex astrological charts.

PARAGRAPH 2: CLASSIFYING DISEASES [STIMULUS 2]
Explain how Sydenham argued diseases were distinct species (like plants), successfully distinguishing measles from scarlet fever.

PARAGRAPH 3: OBSERVATIONES MEDICAE [STIMULUS 1]
Explain his practical innovations in Observationes Medicae (1676) alongside his continued reliance on bloodletting and humoural purging.

ANALYTICAL CONNECTIVES:
A primary reason for this significance was... • In particular, this empirical approach demonstrated that... • Furthermore, systematically categorising evidence showed... • However, practical treatment remained limited because... • Consequently...

KEY VOCABULARY BANK:
English Hippocrates • bedside observation • Observationes Medicae (1676) • clinical symptoms • disease species • scarlet fever vs measles • cinchona bark (quinine) • cooling regime • fresh air • continued bloodletting • purging

Task: *Write your Paragraph 1 response below, then continue Paragraphs 2, 3, and your final Evaluative Verdict on Pages 10–11:*

TIMELINE MISSION Turn to Pages 2–3 (Key Topic 2.2). In the drawing box, sketch Sydenham recording clinical symptoms at a patient's bedside and annotate his landmark book: Observationes Medicae (1676)!

← **Pages 2–3**

MARGIN	*[Extended Response • Paragraph 2 / Further Disciplinary Notes]*

Take a lesson from Sydenham: carefully observe the precise wording of the question before prescribing your argument.

MARGIN	*[Extended Response Continued • Paragraph 3 & Sustained Conclusion]*

KT2.3: Andreas Vesalius & The Anatomical Revolution (1543)

KNOWLEDGE RETRIEVAL • KEY VOCABULARY • EXAM PRACTICE

• 'DO NOW' RETRIEVAL DRILL (10 RECALL QUESTIONS)

Score: [/ 10]

1. What nickname was given to Thomas Sydenham because of his clinical approach?

2. In what landmark 1676 book did Sydenham set out his clinical observations?

3. How did Sydenham view diseases differently from humoural theory?

4. Which two childhood illnesses did Sydenham successfully prove were separate diseases?

5. What imported South American tree bark did Sydenham prescribe for malaria fevers?

6. What revolutionary cooling treatment did Sydenham prescribe for smallpox patients?

7. In what way did Sydenham's treatments still show continuity with the Middle Ages?

8. What was the Royal Society's Latin motto promoting empirical evidence?

9. Where were medical manuscripts copied prior to the invention of the printing press?

10. In what year did William Caxton set up the first printing press in England?

• KEY VOCABULARY TASK

TERMINOLOGY

Define **Human Dissection** and explain why Vesalius's corrections of **Galenic Anatomy** met furious resistance:

• QUESTION 3(A): EXPLAIN ONE DIFFERENCE [4 MARKS]

[4 MARKS • 5 MINS]

Explain one way in which methods of investigating the human body in the Renaissance were different from methods in the Medieval period. [4 marks]

Target: AO1/AO2 [4 marks] • Identify 1 valid difference (1 mark) • Explain with precise historical detail from both named eras (3 marks).

Sentence Stems: *One way in which they were difference was that... • Specifically, in the earlier period... • In contrast, in the later period...*

• QUESTION 3(B): EXPLAIN ONE SIMILARITY [4 MARKS]

[4 MARKS • 5 MINS]

Explain one way in which the effectiveness of surgical treatments in the 16th century was similar to the Medieval period. [4 marks]

Target: AO1/AO2 [4 marks] • Identify 1 valid similarity (1 mark) • Explain with precise historical detail from both named eras (3 marks).

Sentence Stems: *One way in which they were similarity was that... • Specifically, in the earlier period... • In the same way, in the later period...*

Vesalius proved Galen dissected apes instead of humans. Unsurprisingly, monkey ribs and human ribs do not match up.

Question 5/6: Evaluative Essay [16+4 marks • 25 mins]

EXTENDED WRITING ASSESSMENT

'Andreas Vesalius's work on anatomy was the most significant breakthrough in medicine in the period c1500–c1700.' How far do you agree? Explain your answer. [16+4 marks]

Stimulus: De Humani Corporis Fabrica (1543) | Medical treatments in the 16th century *(You must also use information of your own)*

STRUCTURE STRIP • 3 DISTINCT ANALYTICAL PARAGRAPHS (1 box = 1 full paragraph: Stimulus 1 + Stimulus 2 + Own Knowledge)

PARAGRAPH 1: OVERTURNING GALEN [OWN KNOWLEDGE]
Explain how Vesalius dissected human cadavers himself at Padua, correcting 300+ errors (e.g. human lower jaw is 1 bone not 2; no invisible heart pores).

PARAGRAPH 2: MASS COMMUNICATION [STIMULUS 1: DE FABRICA]
Explain the impact of De Fabrica (1543): masterfully illustrated anatomical plates printed identically on printing presses, inspiring a generation of anatomists.

PARAGRAPH 3: LIMITATIONS [STIMULUS 2: 16TH C. TREATMENTS]
Evaluate: Vesalius created accurate anatomy, but knowing the structure of the body did not cure disease. Doctors remained helpless at the bedside.

ANALYTICAL CONNECTIVES:
On the one hand, this work transformed understanding because... • Crucially, direct empirical observation proved that... • Furthermore, wider dissemination was achieved because... • However, in terms of therapeutic cures... • Therefore, the overall significance was...

KEY VOCABULARY BANK:
Andreas Vesalius • University of Padua • De Humani Corporis Fabrica (1543) • human dissection • 300+ Galenic errors • mandible (jawbone) • sternum (3 parts not 7) • septum pores • anatomical plates • lack of medical cures • continued humoural bleeding

Task: *Write your Paragraph 1 response below, then continue Paragraphs 2, 3, and your final Evaluative Verdict on Pages 14–15:*

TIMELINE MISSION Turn to Pages 2–3 (Key Topic 2.3). In the drawing box, sketch Vesalius dissecting the human muscular system and annotate his landmark masterwork: De Humani Corporis Fabrica (1543)!

← **Pages 2–3**

MARGIN	*[Extended Response • Paragraph 2 / Further Disciplinary Notes]*

MARGIN	*[Extended Response Continued • Paragraph 3 & Sustained Conclusion]*

KT2.4: William Harvey & The Circulation of the Blood (1628)

KNOWLEDGE RETRIEVAL • KEY VOCABULARY • EXAM PRACTICE

• 'DO NOW' RETRIEVAL DRILL (10 RECALL QUESTIONS)

Score: [/ 10]

1. In what year did Andreas Vesalius publish De Humani Corporis Fabrica?

2. At which famous Italian university did Vesalius serve as professor of surgery?

3. How did Vesalius's method of teaching anatomy differ from medieval professors?

4. How many anatomical errors made by Galen did Vesalius identify and correct?

5. State one specific anatomical error of Galen corrected by Vesalius.

6. Why did Vesalius's accurate anatomical discoveries fail to cure sick patients?

7. Which ancient Roman doctor's anatomical monopoly was overturned by Vesalius?

8. What 1676 book did Thomas Sydenham publish on clinical bedside symptoms?

9. In what year was the Royal Society granted its Royal Charter by Charles II?

10. What was the Royal Society's motto promoting empirical evidence?

• KEY VOCABULARY TASK

TERMINOLOGY

Define **Circulation of the Blood** and explain how Harvey's **Mechanical Pump** model overturned Galen's liver theory:

• QUESTION 3(A): EXPLAIN ONE DIFFERENCE [4 MARKS]

[4 MARKS • 5 MINS]

Explain one way in which William Harvey's understanding of the circulatory system was different from Galen's theories. [4 marks]

Target: AO1/AO2 [4 marks] • Identify 1 valid difference (1 mark) • Explain with precise historical detail from both named eras (3 marks).

Sentence Stems: *One way in which they were difference was that... • Specifically, in the earlier period... • In contrast, in the later period...*

• QUESTION 3(B): EXPLAIN ONE SIMILARITY [4 MARKS]

[4 MARKS • 5 MINS]

Explain one way in which medical treatments after Harvey's discovery were similar to treatments in the Medieval period. [4 marks]

Target: AO1/AO2 [4 marks] • Identify 1 valid similarity (1 mark) • Explain with precise historical detail from both named eras (3 marks).

Sentence Stems: *One way in which they were similarity was that... • Specifically, in the earlier period... • In the same way, in the later period...*

Harvey calculated the heart pumped 540 pints of blood per hour. Unless patients drank a swimming pool of blood daily, Galen was undeniably wrong.

Question 4: Explain Why [12 marks • 15 mins]

Explain why William Harvey's discovery of the circulation of the blood was a turning point in medicine. [12 marks]

Stimulus: Calculating blood volume (540 pints/hr) | De Motu Cordis (1628) *(You must also use information of your own)*

STRUCTURE STRIP • 3 DISTINCT ANALYTICAL PARAGRAPHS (1 box = 1 full paragraph: Stimulus 1 + Stimulus 2 + Own Knowledge)

PARAGRAPH 1: MECHANICAL PUMP [OWN KNOWLEDGE]
Explain how Harvey proved the heart acts as a pump, circulating blood through a closed one-way system of arteries and veins.

PARAGRAPH 2: MATHEMATICAL PROOF [STIMULUS 1: 540 PINTS]
Explain how Harvey calculated that the heart pumped 540 pints an hour (more than body weight), disproving Galen's theory that the liver made blood from food.

PARAGRAPH 3: RESISTANCE & LIMITS [STIMULUS 2: DE MOTU CORDIS]
Explain why conservative doctors rejected Harvey ('quack') and why his discovery did not change medical treatments or halt bloodletting.

ANALYTICAL CONNECTIVES:
This discovery represented a major turning point because... • By applying mechanical experimentation, it proved that... • Crucially, quantitative evidence demonstrated that... • However, the immediate practical impact was limited because... • Consequently...

KEY VOCABULARY BANK:
William Harvey • De Motu Cordis (1628) • circulation of the blood • mechanical pump • arteries • veins • vein valves (Fabricius) • ligature experiment • 540 pints per hour • capillaries • conservative backlash

Task: *Write your Paragraph 1 response below, then continue Paragraphs 2, 3, and your final Evaluative Verdict on Pages 18–19:*

TIMELINE MISSION Turn to Pages 2–3 (Key Topic 2.4). In the drawing box, sketch the famous arm ligature experiment showing vein valves and annotate: De Motu Cordis (1628)!

← Pages 2–3

MARGIN	*[Extended Response • Paragraph 2 / Further Disciplinary Notes]*

Harvey calculated 540 pints of blood pumped per hour to prove circulation. Use quantitative evidence where you can!

MARGIN	*[Extended Response Continued • Paragraph 3 & Sustained Conclusion]*

KT2.5: Continuity in Treatment & The Great Plague of London (1665)

KNOWLEDGE RETRIEVAL • KEY VOCABULARY • EXAM PRACTICE

• 'DO NOW' RETRIEVAL DRILL (10 RECALL QUESTIONS)

Score: [/ 10]

1. In what year did William Harvey publish De Motu Cordis?

2. How did Harvey mathematically disprove Galen's liver theory?

3. What one-way valves in veins did Harvey investigate using his arm ligature experiment?

4. What microscopic vessels connecting arteries and veins could Harvey not observe?

5. Why did conservative doctors nickname Harvey a 'circulator' (quack)?

6. In what year was Vesalius's De Humani Corporis Fabrica published?

7. State one anatomical error of Galen corrected by Vesalius.

8. What nickname was given to Thomas Sydenham?

9. In what year did the Black Death first strike England?

10. Name the imported South American tree bark prescribed by Sydenham for malaria fevers.

• KEY VOCABULARY TASK

TERMINOLOGY

Define **Civic Quarantine** and explain how the 1665 response to **Miasma** showed continuity with 1348:

• QUESTION 3(A): EXPLAIN ONE SIMILARITY [4 MARKS]

[4 MARKS • 5 MINS]

Explain one way in which attempts to prevent the spread of the Great Plague (1665) were similar to attempts during the Black Death (1348). [4 marks]

Target: AO1/AO2 [4 marks] • Identify 1 valid similarity (1 mark) • Explain with precise historical detail from both named eras (3 marks).

Sentence Stems: *One way in which they were similarity was that... • Specifically, in the earlier period... • In the same way, in the later period...*

• QUESTION 3(B): EXPLAIN ONE DIFFERENCE [4 MARKS]

[4 MARKS • 5 MINS]

Explain one way in which municipal and civic reactions to the Great Plague (1665) were different from reactions to the Black Death (1348). [4 marks]

Target: AO1/AO2 [4 marks] • Identify 1 valid difference (1 mark) • Explain with precise historical detail from both named eras (3 marks).

Sentence Stems: *One way in which they were difference was that... • Specifically, in the earlier period... • In contrast, in the later period...*

In 1665, Eton schoolboys were flogged if they refused to smoke tobacco every morning to ward off plague miasma. Good luck explaining that to your parents.

Question 5/6: Evaluative Essay [16+4 marks • 25 mins]

'Approaches to treating and preventing disease during the Great Plague of 1665 showed almost complete continuity with the Black Death of 1348.' How far do you agree? Explain your answer. [16+4 marks]

Stimulus: The Four Humours and miasma | Quarantine and watchmen *(You must also use information of your own)*

STRUCTURE STRIP • 3 DISTINCT ANALYTICAL PARAGRAPHS (1 box = 1 full paragraph: Stimulus 1 + Stimulus 2 + Own Knowledge)

PARAGRAPH 1: CIVIC QUARANTINE [STIMULUS 2]	PARAGRAPH 2: MEDICAL CONTINUITY [STIMULUS 1]	PARAGRAPH 3: OVERALL BALANCE [OWN KNOWLEDGE]
Explain how London authorities enforced organized quarantine: padlocking infected houses for 28 days with red crosses ('Lord have mercy upon us'), watchmen, and Bills of Mortality.	Explain how doctors still blamed miasma, God, and the Four Humours: smoking tobacco, holding pomanders, bleeding patients, and taking useless quack 'Plague Water'.	Weigh civic organisation against medical ignorance: government responses became more organized, but medical knowledge of the disease was identical to 1348.

ANALYTICAL CONNECTIVES:
On the one hand, contemporary responses showed clear change because... • For example, local civic authorities enforced... • On the other hand, there was substantial continuity in... • Crucially, underlying medical beliefs remained unchanged because... • Overall, while administrative methods adapted...

KEY VOCABULARY BANK:
The Great Plague (1665) • London Bills of Mortality • 28-day house quarantine • red crosses • Lord have mercy upon us • searchers of the dead • mass plague pits • parish watchmen • miasma • pomanders • smoking tobacco • continued bloodletting

Task: *Write your Paragraph 1 response below, then continue Paragraphs 2, 3, and your final Evaluative Verdict on Pages 22–23:*

TIMELINE MISSION Turn to Pages 2–3 (Key Topic 2.5). In the drawing box, sketch Londoners fleeing the 1665 plague, padlocked houses with red crosses, and the dead-cart collecting bodies. Annotate why treatments showed continuity with 1348! ← **Pages 2–3**

MARGIN	*[Extended Response • Paragraph 2 / Further Disciplinary Notes]*

MARGIN	*[Extended Response Continued • Paragraph 3 & Sustained Conclusion]*
