

Paper 1: Medicine Through Time with the Western Front

"Why did the Medical Renaissance have so little impact on everyday treatments?"

MASTERY PACK: RENAISSANCE

Operative / Student Name: _____

Target: Total Recall of 90 Crucial Questions

RESTRICTED ACCESS - MASTER YOUR MEMORY

How to Hack Your Memory

(Rules of Engagement)

1. Never Just Read

Reading the answers feels like learning, but it's an illusion. You must force your brain to struggle to find the answer. The struggle is what builds memory pathways.

2. Cover, Recall, Check

Cover the answer sheet. Write your answer down in the notes section (or say it out loud). Only then are you allowed to check 'The Vault'.

3. Track Your Threat Level

Use the R-A-G (Red, Amber, Green) checkboxes next to every question after you attempt it.

- ☐ **Green:** I nailed it instantly.
- ☐ **Amber:** I got it, but I had to think hard.
- ☐ **Red:** My mind went blank. (Revisit these tomorrow).

4. The Interrogation (Homework Protocol)

True mastery requires testing under pressure. Hand 'The Vault' (answers) to your parent or guardian. They will test you on 20 random questions. They hold the score; they hold the signature.

KT2.1: Did the Renaissance change beliefs about the causes of illness?

Q#	The Target Question	R	A	G	Notes / My Answer
1	What does the French word 'Renaissance' translate to, and what did it represent in medical history?	☐	☐	☐	
2	How did the rise of Protestantism during the Reformation affect the Church's influence over scientific and medical learning in the Renaissance?	☐	☐	☐	
3	How did Johannes Gutenberg's printing press (developed in around 1440) directly support progress in medical knowledge during the Renaissance?	☐	☐	☐	
4	Why was the 17th-century English physician Thomas Sydenham known as the 'English Hippocrates'?	☐	☐	☐	
5	How did Thomas Sydenham's view of disease fundamentally challenge the traditional Theory of the Four Humours?	☐	☐	☐	
6	Which two diseases did Thomas Sydenham successfully distinguish and classify as separate illnesses in his clinical observation work?	☐	☐	☐	
7	What was the primary objective of the Royal Society, which was founded in London in the year 1660?	☐	☐	☐	
8	What was the official Latin motto of the Royal Society, and what did it encourage scientists to do?	☐	☐	☐	

Q#	The Target Question	R	A	G	Notes / My Answer
9	What was the name of the Royal Society's scientific journal, first published in 1665, which allowed scientists to share and peer-review research globally?	☐	☐	☐	
10	In 1683, Antony van Leeuwenhoek used an improved microscope to observe 'animalcules' (bacteria) for the first time. What was the major limitation of this breakthrough in the Renaissance?	☐	☐	☐	
11	Why did Renaissance physicians continue to use the Theory of the Four Humours when diagnosing patients, despite many doctors beginning to doubt its scientific accuracy by the late 17th century?	☐	☐	☐	
12	How did beliefs about 'miasma' change during the Medical Renaissance?	☐	☐	☐	
13	Andreas Vesalius's anatomical dissections proved that Galen had made over 200 mistakes. Why did this breakthrough have almost no immediate impact on everyday medical treatments?	☐	☐	☐	
14	Which of the following was a revolutionary treatment for smallpox developed by Thomas Sydenham that directly challenged traditional medieval practices?	☐	☐	☐	
15	What was the 'Royal Touch' and what did its popularity during the Renaissance demonstrate about society's beliefs?	☐	☐	☐	
16	What intellectual movement in the Renaissance period encouraged people to think for themselves, ask questions, and use observation to find the truth?	☐	☐	☐	
17	How did the training of physicians in universities begin	☐	☐	☐	

Q#	The Target Question	R	A	G	Notes / My Answer
	to improve during the Renaissance?				
18	In what way did the printing press improve scientific accuracy in medical research compared to manual copying by medieval monks?	☐	☐	☐	
19	What popular New World herbal remedy, imported from Peru, did Thomas Sydenham popularise to treat malaria (ague)?	☐	☐	☐	
20	Which of the following statements best summarises the progress made in ideas about the causes of disease between 1500 and 1700?	☐	☐	☐

KT2.1: Did the Renaissance change beliefs about the causes of illness?

Q#	The Target Question	R	A	G	Notes / My Answer
21	In what year did the Black Death arrive in England?	☐	☐	☐	
22	Who were the 'flagellants'?	☐	☐	☐	
23	State one common medieval preventative measure for the Black Death.	☐	☐	☐	
24	What was the Renaissance?	☐	☐	☐	
25	What invention helped spread new medical ideas during the Renaissance?	☐	☐	☐	
26	Who was Thomas Sydenham?	☐	☐	☐	
27	How did medieval hospitals differ from modern ones?	☐	☐	☐	
28	What was the purpose of 'bleeding' (phlebotomy) in medieval medicine?	☐	☐	☐	
29	Why did the influence of the Church begin to decline in the Renaissance?	☐	☐	☐	
30	What was the Royal Society?	☐	☐	☐	
31	What is the primary reason why Andreas Vesalius's major Renaissance breakthroughs in anatomy did not immediately improve everyday medical treatments for patients?	☐	☐	☐	
32	Which of the following treatments represents a major CONTINUITY in everyday medical practice between the Medieval period and the Medical Renaissance (c1500-c1700)?	☐	☐	☐	

Q#	The Target Question	R	A	G	Notes / My Answer
33	What was the new Renaissance medical theory of 'transference', and how was it practically applied by patients?	☐	☐	☐	
34	How did exploration of the 'New World' (the Americas) change herbal medicine in Renaissance England?	☐	☐	☐	
35	What was the medical term 'iatrochemistry' (or alchemy), which became increasingly popular during the Renaissance?	☐	☐	☐	
36	Why did the chemical element antimony become a controversial treatment during the Renaissance?	☐	☐	☐	
37	Which major political event in 1536 had a devastating immediate impact on hospital care and charity beds across England?	☐	☐	☐	
38	Following the Dissolution of the Monasteries in 1536, what major change occurred in how surviving hospitals were funded and run?	☐	☐	☐	
39	How did the primary focus of hospitals shift during the Renaissance compared to their medieval predecessors?	☐	☐	☐	
40	How did the London city council and local charity manage to keep St Bartholomew's Hospital open after 1536?	☐	☐	☐

KT2.2: Did treatments improve during the Renaissance?

Q#	The Target Question	R	A	G	Notes / My Answer
41	What were 'Pest Houses' and why were they introduced during the Renaissance period?	☐	☐	☐	
42	If a Renaissance patient suffered from a disease that produced a red skin rash, such as smallpox, what traditional herbal-associative treatment would they most likely receive?	☐	☐	☐	
43	What was a major change in the medical staff employed by municipal hospitals like St Bartholomew's during the late Renaissance?	☐	☐	☐	
44	Why did everyday people in Renaissance England continue to rely on traditional family treatments in the home rather than municipal hospitals or professional physicians?	☐	☐	☐	
45	Which of the following is a classic example of iatrochemistry/alchemy used as an everyday treatment in the late 1600s, showing the dangerous nature of some Renaissance medical experiments?	☐	☐	☐	
46	How did the role of professional guilds, such as the Company of Barber-Surgeons, affect medical training during the Renaissance?	☐	☐	☐	
47	How did the treatment of plague victims in the 1665 Great Plague demonstrate continuity with the 1348 Black Death?	☐	☐	☐	
48	Why did people in the 1500s and 1600s begin to take fewer warm baths, representing a decline in hygiene compared to the medieval period?	☐	☐	☐	

Q#	The Target Question	R	A	G	Notes / My Answer
49	What did King Charles II's final medical treatment in 1685 (such as opening veins for bleeding and purging his bowels) demonstrate about the state of royal medicine at the end of the Renaissance?	☐	☐	☐	
50	Which statement best describes the overall pace of change in medical TREATMENTS during the Medical Renaissance (c1500-c1700)?	☐	☐	☐	
51	What was the Renaissance?	☐	☐	☐	
52	What invention helped spread new medical ideas during the Renaissance?	☐	☐	☐	
53	Who was Thomas Sydenham?	☐	☐	☐	
54	Who wrote 'On the Fabric of the Human Body' (1543)?	☐	☐	☐	
55	What did Vesalius prove about Galen's anatomical ideas?	☐	☐	☐	
56	What was 'transference'?	☐	☐	☐	
57	In what year did the Black Death arrive in England?	☐	☐	☐	
58	Explain the role of the apothecary in medieval medicine.	☐	☐	☐	
59	Why did Vesalius' anatomical discoveries have limited immediate impact on medical treatments?	☐	☐	☐	
60	Name one new herbal remedy brought to Europe from the New World.	☐	☐	☐

KT2.3: How significant were William Harvey and the Great Plague?

Q#	The Target Question	R	A	G	Notes / My Answer
61	In his landmark 1628 publication, <i>An Anatomical Account of the Motion of the Heart and Blood</i> , what did William Harvey empirically prove about the human body?	☐	☐	☐	
62	Which mechanical technology of the 17th century did William Harvey use as a scientific analogy to explain how the heart's valves function?	☐	☐	☐	
63	Which ancient authority's medical teachings did William Harvey's work on the circulatory system directly contradict and disprove?	☐	☐	☐	
64	Why did William Harvey's discovery of blood circulation have almost no immediate impact on everyday medical treatments in the short term?	☐	☐	☐	
65	How did the English medical establishment initially react to William Harvey's publication in 1628?	☐	☐	☐	
66	How long did it take for William Harvey's discoveries about blood circulation to be officially adopted into the medical curriculum at English universities?	☐	☐	☐	
67	What vital scientific limitation prevented William Harvey from fully explaining how blood traveled from the arteries back into the veins?	☐	☐	☐	
68	In the long term, why was William Harvey's breakthrough in physiology so significant for modern medicine?	☐	☐	☐	

Q#	The Target Question	R	A	G	Notes / My Answer
69	How did the mortality rate of the 1665 Great Plague in London compare to the 1348 Black Death in England?	☐	☐	☐	
70	What was the most significant difference in the government and municipal response to the 1665 Great Plague compared to the 1348 Black Death?	☐	☐	☐	
71	If a London household had a member diagnosed with the Great Plague in 1665, what quarantine measure was legally enforced by watchmen?	☐	☐	☐	
72	What was the specific, dangerous duty of the municipal officials known as 'searchers' during the Great Plague of 1665?	☐	☐	☐	
73	Why did London authorities order the mass slaughter of roughly 40,000 dogs and cats in 1665, and what was the unintended consequence?	☐	☐	☐	
74	Which of the following was a preventative measure enforced by municipal authorities in London in 1665 to limit the spread of the plague?	☐	☐	☐	
75	How did municipal authorities organize the burial of plague victims in 1665 to minimize the risk of miasma?	☐	☐	☐	
76	Why did both medieval mayors in 1348 and Renaissance mayors in 1665 order giant barrels of tar and bonfires to be burned in the streets?	☐	☐	☐	
77	What was the believed physical purpose of the bird-shaped beak mask worn by Renaissance 'plague doctors'?	☐	☐	☐	
78	Which bizarre, superstitious treatment recorded during the 1665 Great Plague demonstrates	☐	☐	☐	

Q#	The Target Question	R	A	G	Notes / My Answer
	the complete lack of improvement in medical cures since 1348?				
79	Why were schoolboys at Eton College severely punished or beaten if they refused to smoke tobacco during the Great Plague of 1665?	☐	☐	☐	
80	What does the continued use of amulets, carrying pomanders, and humoral bleeding during the Great Plague of 1665 demonstrate about Renaissance medicine?	☐	☐	☐

THE VAULT

Restricted Access: Answer Keys

KT2.1: Did the Renaissance change beliefs about the causes of illness?

1. Rebirth; a period of reborn interest in classical worlds combined with a love of enquiry and a willingness to challenge old ideas
2. It made the Catholic Church much less able to promote and enforce its preferred beliefs about science and nature
3. It allowed new, controversial discoveries to be printed rapidly and shared cheaply, making it harder for the Church to censor or block them
4. Because he urged doctors to stop relying blindly on classical books and instead closely observe their patients' symptoms to diagnose them
5. He argued that diseases were separate, independent 'species' that could be grouped and classified like plants, rather than being unique to each individual's humoural balance
6. Measles and Scarlet Fever
7. To encourage scientific enquiry, promote empirical experimentation, and provide a hub for scientists to share their research
8. 'Nullius in verba' (Take nobody's word for it); it encouraged scientists to do experiments to prove things rather than just trusting classical authorities
9. Philosophical Transactions
10. He did not realise that these 'animalcules' actually caused illnesses, meaning spontaneous generation and miasma remained the dominant beliefs
11. Because patients fully understood the humoural system, and physicians had to respect their clients' expectations to earn a living
12. The belief in miasma remained highly popular and became even more widespread during devastating epidemics like the Great Plague of 1665
13. Because knowing the correct structure of the bones and organs did not give doctors new cures, so they continued to use traditional bleeding and herbal remedies
14. Prescribing airy bedrooms, light blankets, and cold drinks instead of the traditional 'sweating' method
15. The belief that the monarch could cure skin diseases like scrofula simply by touching the patient, demonstrating how slowly traditional and supernatural beliefs changed
16. Humanism
17. Students began to observe real human dissections alongside classical texts, using highly accurate printed anatomical illustrations
18. It guaranteed that every copy of a medical book contained identical, error-free text and precise anatomical drawings

- 
19. Cinchona bark (quinine)
 20. New anatomical knowledge and clinical observations laid vital foundations for the future, but everyday medical beliefs and treatments for the general public changed very little
 21. 1348.
 22. People who whipped themselves to show penance to God.
 23. Carrying sweet-smelling herbs or lighting fires.
 24. A period of 'rebirth' in learning, art, and science from the 14th to 17th century.
 25. The printing press.
 26. An English physician who advocated observing patients' symptoms rather than relying on books.
 27. They provided shelter and care, not medical treatment.
 28. To restore balance to the four humours by releasing excess blood.
 29. The scientific method promoted questioning old authorities, and the Reformation weakened Church power.
 30. A group of scientists established in 1660 to share and discuss scientific experiments and discoveries.
 31. Knowing the correct structure of bones and organs did not give doctors new chemical cures or treatments, so they continued to use traditional bleeding and purging
 32. The continued reliance on bloodletting and purging to balance the Four Humours
 33. The belief that an illness could be transferred to another object or animal, such as rubbing an onion on warts
 34. It introduced new, effective herbal ingredients like cinchona bark (quinine) to treat malaria
 35. The search for chemical and mineral-based cures (using metals like antimony) rather than plant-based remedies
 36. Because in large doses it promoted sweating and vomiting to clear the body, but in small doses it was used as a daily general tonic
 37. Henry VIII's Dissolution of the Monasteries
 38. They transitioned from monastic control to being run and funded by secular town councils and charities
 39. They shifted from providing general hospitality and spiritual 'care' to actively treating wounds and curable physical illnesses
 40. By petitioning Henry VIII, who re-founded the hospital himself under municipal control in 1546

KT2.2: Did treatments improve during the Renaissance?

41. Specialized, secular isolation hospitals opened by town councils specifically to quarantine people suffering from highly contagious diseases like the plague
42. The 'red cure,' which involved drinking red wine, eating red foods, and wearing red clothing
43. They began employing university-trained physicians to actively treat and cure patients' physical conditions
44. Because physicians were extremely expensive, and mothers, wives, or local wise women provided familiar, free, and accessible herbal care
45. Prescribing ingredients derived from metals and minerals, such as mercury to treat syphilis, or using 'cold deadman's skull' in remedies
46. They helped to professionalize surgeons by regulating training through apprenticeships, separating their work from simple hair cutting
47. Both outbreaks were treated with humoral remedies (bleeding and purging), herbal mixtures, and prayers, because the cause (germs) was still unknown
48. Because public bath houses became associated with the rapid spread of the 'Great Pox' (syphilis), making people terrified of catching it
49. That despite monumental scientific discoveries, clinical medicine at the bedside remained heavily based on traditional, medieval humoral treatments
50. Treatments remained highly traditional with immense continuity, as the new scientific discoveries in anatomy and physiology did not yet translate into practical bedside cures
51. A period of 'rebirth' in learning, art, and science from the 14th to 17th century.
52. The printing press.
53. An English physician who advocated observing patients' symptoms rather than relying on books.
54. Andreas Vesalius.
55. Galen had made over 300 mistakes because he dissected animals, not humans.
56. A Renaissance belief that a disease could be passed on or transferred to an object or animal.
57. 1348.
58. Preparing and selling herbal remedies and potions.
59. Knowing correct anatomy did not provide cures for diseases, and many doctors still relied on Galen.
60. Cinchona bark (quinine) or Tobacco.

KT2.3: How significant were William Harvey and the Great Plague?

61. That the heart acts as a muscular pump circulating blood continuously around the body in a one-way system
62. A fire-fighting water pump
63. Galen's theory that the liver constantly manufactures new blood

- 
64. Knowing that blood circulated did not cure diseases, so physicians continued to use traditional bleeding and purging
 65. Many doctors openly criticized or ignored him because his theory had no practical application at the bedside
 66. It took nearly 50 years, with his ideas only regularly appearing in university medical lectures from around 1673
 67. Microscopes of the era were not powerful enough to see the tiny capillaries linking arteries and veins
 68. It served as the essential foundation for subsequent surgical developments, blood transfusions, and cardiology
 69. The Great Plague killed roughly 15% of London's population (about 100,000 people), whereas the 1348 Black Death killed nearly 30-50% of the entire country
 70. In 1665, local authorities implemented highly organized, centralized regulations enforced by watchmen and searchers
 71. The house was boarded up with the entire family locked inside for 28 days, marked with a red cross on the door
 72. To inspect homes, identify plague victims, confirm the cause of death, and monitor the spread
 73. They believed the animals spread the plague through their breath, but killing them allowed the rat population (which carried the plague-carrying fleas) to explode
 74. Banning large public gatherings, closing theatres, and locking down taverns
 75. Bodies were collected in carts only at night and buried in deep, mass graves (plague pits) outside the city walls
 76. To purify the air and drive away the disease-carrying 'bad air' (miasma)
 77. They believed birds attracted the plague, so the mask would draw the disease away from the patient and into the herb-filled beak
 78. Strapping a live, plucked chicken to a swollen plague bubo to draw out the poison
 79. Tobacco smoke was believed to act as a powerful chemical shield to ward off the deadly plague miasma
 80. That without an understanding of germs, people's fundamental beliefs about what caused the plague had not changed since 1348

KT2.3: How significant were William Harvey and the Great Plague?

81. Andreas Vesalius.
82. Galen had made over 300 mistakes because he dissected animals, not humans.
83. A Renaissance belief that a disease could be passed on or transferred to an object or animal.
84. Blood circulates around the body, pumped by the heart.
85. Galen believed the liver constantly manufactured new blood which was consumed by the body.
86. 1665.
87. Cleaning streets and stopping visitor trade.
88. The belief that health was governed by the balance of blood, phlegm, black bile, and yellow bile.
89. His discovery was scientifically brilliant, but had zero immediate impact on treating patients.
90. Mayors employed searchers to identify victims and quarantined sick families inside their houses for 40 days.
